General Situation during July 2020

Forecast for August 2020

Massive Locust (ML) natural cycle completed in all Caucasus and Central Asia (CCA) countries, while mating and egg-laying continued in the Russian Federation. The Lesser Locust (LL) and the Asian Migratory Locust (AML) started mating and egg-laying in CCA. The situation with ML was considered dangerous only in the north Caucasus Federal District of the Russian Federation. It was classified as caution for CIT in Georgia and Azerbaijan, as well as for CIT and LPT in Kazakhstan and the Russian Federation. It became safe for other species or in the other countries. Swarms average of adults and egg-laying were continued in all countries. Control operations in July covered 112 107 hectares that is CCA and in total 2 046 526 ha since the beginning of the 2020 campaign, which is 37% higher than during the last two campaigns (1 501 526 ha in 2019 and 1 044 526 ha in 2017). During the forecast period, ML natural cycle will be completed in the Russian Federation and CIT life cycle will come to an end in Caucasus, Azerbaijan and Uzbekistan. CIT and LPT mating and egg-laying will continue in Kazakhstan and the Russian Federation.

Caucasus. ML mating and egg-laying ended in the region. In Azerbaijan and Georgia, the situation with CIT required attention due to swarms flying while it was safe in Armenia. No LPT was observed this year in Azerbaijan. But

in the emerging situations announced in several districts in the north of the Russian Federation because of swarms attacking crops, the situation with ML was considered as dangerous, while it was classified as caution for CIT in all areas and for LPT in the Russian Federation. Control operations in Caucasus and the Russian Federation were conducted on an area of 108 807.5 ha in July and on 217 471.2 ha from the start of the campaign, which is 37% lower than 2019 (159 882 ha). There were no locust swarms conducted this year in Armenia, and other Caucasus countries reported a decrease of treated areas as compared to 2019. In August, CIT breeding will continue in the Caucasus countries as well as for both CIT and LPT egg-laying in the Russian Federation.

Central Asia. ML natural cycle came to an end in all countries. CIT pupae development continued in Kazakhstan and Kyrgyzstan, where in some areas hatching and mating started in Uzbekistan. CIT mating and egg-laying continued. Control operations were completed in Afghanistan, Tajikistan, Turkmenistan and Uzbekistan. Treatment against locusts and grasshoppers in July covered 107 174 ha reaching 1 470 576 ha since the start of the 2020 campaign, which is 40% higher than in 2019 at the same period (1 052 544 ha). Although all countries reported an increase of treated and tested areas in 2020, the most significant increase occurred in Kazakhstan, as forecasted, and amounted to more than half of the whole treated area in CCA. For the forecast period, CIT breeding will continue in Kazakhstan and Azerbaijan, as well as LPT egg-laying in
