**Anticipating and Assessing Health Care Technology** Scenario Commission on Future Health Care Technology. SCT.,Steering Committe on future Health Scenarios. STG.,1987 In an overall sense the study concerns a system for assessing health care technology Assessing technology means simply trying to understand its important consequences in a narrow sense health care technology assessment is the evaluation or testing of a technology for safety and efficacy benefits In a broader sense it is a process of policy research that examines the short and long term consequences of individual health care technologies and thereby is a source of information needed by policy makers in developing policy and formulating legislation and regulations by industry in developing products by health professionals in treating and serving patients and by consumers in making personal health decisions A system to identify future health care technology is an integral part of a complete system for health care technology assessment In this project special surveys of experts were carried out The

information was used to identify potential future technologies Further consultation with those experts and others and examination of the medical literature gave information on the possible importance of many of those technologies The information is presented in volume II of the project reports *Anticipating and Assessing Health Care Technology Scenario* Commission on Future Health Care Technology, 2013-03-09 As noted in the Foreword this report is one of several volumes resulting from this study of future health care technology The purpose of the study as formulated by the STG was to analyze future health care technology Part of the task was to develop an early warning system for health care technology The primary goal of the project was to develop a list or description of a number of possible and probable future health care technologies as well as information on their importance Within the limits of time and money this has been done However given the vast number of possible future health care technologies complete information on the importance of each area could not be developed in any depth for all technology Therefore four specific technologies were chosen and were prospectively assessed These future technologies were examined in more depth looking particularly at their future health and policy implications Subsequently the project was extended to September 1986 and two additional technologies were chosen for assessment

Summary** Stuurgroep Toekomstscenario's Gezondheidszorg STG., 1987 [Anticipating and Assessing Health Care Technology: Developments in Human Genetic Testing](#), 1987 [Anticipating and Assessing Health Care Technology: Future technological changes](#), 1987 [Anticipating and Assessing Health Care Technology](#), 1987-05-31 This report *Anticipating and Assessing Health Care Technology* is the first report from the STG Commission on Future Health Care Technology The STG Stuurgroep Toekomstscenario's Gezondheidszorg was established in 1983 as an independent advisory group to the State Secretary for Welfare Public Health and Cultural Affairs WVC to assist in long range health planning efforts Thus far STG commissions have examined cardiovascular disease cancer aging and life styles as issues of importance to the health of the Dutch population in the future Obviously health care technology is of great concern to the

government On the one hand technology is one of the major tools to promote a healthy population On the other hand the costs of health care have been rising at an alarming rate in recent years It was these two facts along with the social consequences of certain technologies such as genetic screening that led the STG to establish the Commission on Future Health Care Technology in 1985 The European Office of the World Health Organization EURO cosponsored the project The Health Council Gezondheidsraad agreed to cooperate with the project by furnishing space and intellectual and logistical support The goal of the Commission s work is to develop sufficient information on future technological developments in health and health care to assist planning for their consequences Subsequent reports will give more detail on future health care technologies and will provide in depth assessments on a few specific technological areas

**Anticipating and Assessing Health Care Technology** Steering Committee on Future Health Scenarios. STG.,Scenario Commission on Future Health Care Technology,1988 This report focuses on the system of home care and not technology itself The report starts from the assumption that complex technology can be a valuable part of home care but that its role is severely limited without developments in the home care system itself The report also presents examples of new and future technologies that could be beneficial in home care The policy conclusions deal with possible changes in this system as well as changes related to the technology of care
