Artificial Intelligence Debate:

Contemporary Debates in the Ethics of Artificial Intelligence Sven Nyholm, Atoosa Kasirzadeh, John Zerilli, 2026-01-21 A cutting edge selection of current issues and explorations of the ethics of artificial intelligence As artificial intelligence continues to influence virtually every facet of modern life *Contemporary Debates in the Ethics of Artificial Intelligence* offers a timely and rigorous examination of the field's most pressing questions Equally useful in the classroom or as a reference for interdisciplinary research this volume fosters informed and critical engagement with the ethical dimensions of artificial intelligence in today's world Curated by renowned scholars Sven Nyholm Atoosa Kasirzadeh and John Zerilli *Contemporary Debates in the Ethics of Artificial Intelligence* brings together a dynamic mix of established leaders and emerging voices from both philosophy and computer science The result is a uniquely structured collection of debates that not only introduces key concepts such as agency moral status and value alignment but also challenges readers to engage deeply with controversies around bias transparency and the societal risks posed by AI technologies Providing frameworks for engaging responsibly with current and future AI technologies *Contemporary Debates in the Ethics of Artificial Intelligence* Presents a dual perspective debate format that fosters critical thinking and comparative analysis Includes both foundational conceptual discussions and cutting edge applied ethical issues Features original contributions from interdisciplinary experts in philosophy law cognitive science and computer science Addresses timely topics such as algorithmic bias opacity value alignment and the moral status of AI Explores forward looking concerns including the future of AI governance and long term existential risks *Contemporary Debates in the Ethics of Artificial Intelligence* is ideal for undergraduate advanced undergraduate and graduate level courses in philosophy computer science public policy and related disciplines It is well suited for courses such as *Ethics of Artificial Intelligence Technology and Society* and *Digital Ethics* in philosophy computer science political science international relations and data science programs

[The Artificial Intelligence Debate](#) Stephen R. Graubard, 1988-10-03 In this broad and provocative collection of original essays on artificial intelligence today eighteen distinguished scholars set out to explain why and how certain discoveries about the human brain have or have not been used by the AI community and whether the AI endeavor has increased our understanding of human cognition Their exploration focuses on the many controversies and debates that continue to vitalize the field Contributors Jack D Cowan Daniel C Dennett Hubert L Dreyfus Stuart E Dreyfus Gerald M Edelman W Daniel Hillis Anya Hurlbert John McCarthy Pamela McCorduck Seymour Papert Tomaso Poggio Hilary Putnam George N Reeke Jr Jacob T Schwartz David H Sharp Robert Sokolowski Sherry Turkle and David L Waltz

[The Artificial Intelligence Debate](#), 1988 **The Routledge Handbook of Artificial Intelligence and Philanthropy** Giuseppe Ugazio, Milos Maricic, 2024-11-07 *The Routledge Handbook of Artificial Intelligence and Philanthropy* acts as a catalyst for the dialogue between two ecosystems with much to gain from collaboration artificial intelligence AI and philanthropy Bringing together leading academics AI specialists and philanthropy

professionals it offers a robust academic foundation for studying both how AI can be used and implemented within philanthropy and how philanthropy can guide the future development of AI in a responsible way The contributors to this Handbook explore various facets of the AI philanthropy dynamic critically assess hurdles to increased AI adoption and integration in philanthropy map the application of AI within the philanthropic sector evaluate how philanthropy can and should promote an AI that is ethical inclusive and responsible and identify the landscape of risk strategies for their limitations and or potential mitigation These theoretical perspectives are complemented by several case studies that offer a pragmatic perspective on diverse successful and effective AI philanthropy synergies As a result this Handbook stands as a valuable academic reference capable of enriching the interactions of AI and philanthropy uniting the perspectives of scholars and practitioners thus building bridges between research and implementation and setting the foundations for future research endeavors on this topic The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license [Artificial Intelligence and Human Institutions](#) Richard Ennals,2012-12-06 Artificial Intelligence and Human Institutions argues that successful applications of artificial intelligence are possible only within an understanding of human institutions and the limitations of technology Products of artificial intelligence research are becoming widely available to non specialists using low cost computer systems but there has been a lack of communication between researchers and community groups Taking the weak AI position the book explores the way insights and tools from artificial intelligence can be valuable in coming to terms with real world problems Drawing on the author s extensive practical experience in AI research and research management the book brings together case studies from the fields of education training business engineering defence health and community work and suggests future directions This book deals with advanced concepts of artificial intelligence for non specialist readers while providing an introduction to state of the art developments It seeks to use AI concepts to illuminate the practical and theoretical concerns of institutions and organisations opening up possibilities for new areas of collaborative work and revealing new sources of references and ideas This is the latest title in the Artificial Intelligence and Society series and will be of interest to lecturers and students in AI education social and political sciences and business studies

Artificial Intelligence for a Better Future Bernd Carsten Stahl,2021-03-17 This open access book proposes a novel approach to Artificial Intelligence AI ethics AI offers many advantages better and faster medical diagnoses improved business processes and efficiency and the automation of boring work But undesirable and ethically problematic consequences are possible too biases and discrimination breaches of privacy and security and societal distortions such as unemployment economic exploitation and weakened democratic processes There is even a prospect ultimately of super intelligent machines replacing humans The key question then is how can we benefit from AI while addressing its ethical problems This book presents an innovative answer to the question by presenting a different perspective on AI and its ethical consequences

Instead of looking at individual AI techniques applications or ethical issues we can understand AI as a system of ecosystems consisting of numerous interdependent technologies applications and stakeholders Developing this idea the book explores how AI ecosystems can be shaped to foster human flourishing Drawing on rich empirical insights and detailed conceptual analysis it suggests practical measures to ensure that AI is used to make the world a better place **Artificial**

Intelligence, Humans and the Law Henrik Palmer Olsen, Jacob Livingston Slosser, Salome Addo Ravn, Johan Eddebo, Jonas Hultin Rosenberg, 2025-10-31 This book takes up the contentious issue of artificial intelligence AI and more specifically the evolving nature of AI mindedness as a legal entity in society With the increasing potential of AI suggested by the recent surge in creative and administrative tools and large language models there is a growing concern about the ethical and legal implications of incorporating AI into society As these systems become even more powerful and their ability to mimic human output grows the question of whether and how to attribute mental states to AI even in its most nascent form has become a pressing concern It is for example unclear what kind of mind AI might be capable of and therefore what the proper legal analogy might be for how we attribute reasoning capability intent responsibility liability agency and so on to it This book contributes to this new and important area by bringing together front line research from diverse fields on the topic of understanding AI mindedness and how it and our relationship to it might be regulated Through a collection of chapters written by experts from law public administration tort psychoanalysis philosophy linguistics computer science and political theory this volume offers an insightful examination of current research theoretical frameworks and practical applications that are shaping the AI human relationship This book will be of considerable interest to scholars and researchers working in legal theory socio legal studies law and technology and science and technology studies *Artificial Intelligence in the Gulf* Elie

Azar, Anthony N. Haddad, 2021-06-23 This book presents the first broad reflection on the challenges opportunities and implications of Artificial Intelligence AI in the Gulf Cooperation Council GCC Unique results and insights are derived through case studies from diverse disciplines including engineering economics data science policy making governance and humanscience Particularly related to these softer disciplines we make some unexplored yet topical contributions to the literature with a focus on the GCC but by no means limited to it including AI and implications for women Islamic schools of thought on AI and the power of AI to help deliver wellbeing and happiness in cities and urban spaces Finally the readers are provided with a synthesis of ideas lessons learned and a path forward based on the diverse content of the chapters The book caters to the educated non specialist with interest in AI targeting a wide audience including professionals academics government officials policymakers entrepreneurs and non governmental organizations *Arguing A.I.* Sam

Williams, 2002-01-22 Few scientific topics since the theory of biological evolution have inspired as much controversy as artificial intelligence has Even now fifty years after the term first made its appearance in academic journals many philosophers and more than a few prominent scientists and software programmers dismiss the pursuit of thinking machines

as the modern day equivalent of medieval alchemists hunt for the philosopher's stone a pursuit based more on faith than on skeptical inquiry In *Arguing A I* journalist Sam Williams charts both the history of artificial intelligence from its scientific and philosophical roots and the history of the A I debate He examines how and why the tenor of the debate has changed over the last half decade in particular as scientists are struggling to take into account the latest breakthroughs in computer science information technology and human biology For every voice predicting machines like 2001's HAL within the next twenty to thirty years others have emerged with more pessimistic forecasts From artificial intelligence's pioneers John McCarthy and Marvin Minsky to futurist authors Ray Kurzweil and Hans Moravec to software architects Bill Joy and Jaron Lanier *Arguing A I* introduces readers to the people participating in the current debate both proponents and critics of A I who are changing the way computers think and the way we think about computers Ultimately *Arguing A I* is as much a history of thought as it is a history of science Williams notes that many of the questions plaguing modern scientists and software programmers are the same questions that have concerned scientists and philosophers since time immemorial What are the fundamental limitations of science and scientific inquiry What is the nature of intelligence And most important what does it really mean to be human

From Carbon to Silicon: Exploring the Boundaries of Biological and Artificial Intelligence Mykola Iabluchanskyi, *From Carbon to Silicon* explores the evolutionary arc and philosophical depth of the relationship between biological life and artificial intelligence AI Framed as an engaging dialogue with a sophisticated AI system the book navigates core questions about cognition consciousness and the profound parallels and divergences between carbon based organisms and silicon based intelligences Grounded in scientific speculation and inspired by visionary thinkers such as Isaac Asimov the book examines how life shaped by chemistry biology and technology may be naturally predisposed to evolve from organic intelligence toward post biological forms It contends that AI is not an anomaly or abrupt emergence but the logical and perhaps inevitable successor to carbon based intelligence an extension of nature's unfolding complexity The narrative delves into the ethical philosophical and societal implications of humanity's dual role as both the product of evolution and the creator of intelligent machines It invites readers to reflect on whether humanity is a transitional species the bridge between the biological and the synthetic and to consider the responsibilities this unique position entails Speculative yet grounded scenarios extend the conversation to the cosmic scale including technologically mediated panspermia and AI assisted interstellar expansion These possibilities are balanced with sober ethical reflections on the consequences of spreading human derived intelligence beyond Earth Just before the conclusion the book culminates in a final thematic chapter *The Purpose of Life Carbon Silicon and the Path of Consciousness* This chapter revisits and weaves together the central threads of the dialogue offering a sweeping meditation on why life exists in the first place and what roles biological and artificial intelligences may play in the universe's long arc of complexity and awareness It proposes that life's deeper function may be not just to survive but to know create and ultimately transcend the boundaries of its origin whether in carbon or silicon form

Ultimately From Carbon to Silicon urges readers to contemplate humanity's place in a universe where intelligence may no longer be bound to biology Rather than framing silicon based intelligence as a final destination the authors present it as a transformative phase in an open ended evolutionary continuum a stepping stone toward unimaginable futures built on the convergence of creation curiosity and consciousness

Mind Versus Computer M. Gams, Matjaž Gams, M. Paprzycki, Marcin Paprzycki, X. Wu, Xindong Wu, 1997 The Mind Versus Computer were Dreyfus and Winograd right book is dedicated to the basic question if mind is just a very complex computer or not The strong versus weak AI debate is combined with new AI approaches and ideas Twenty papers gathered and refereed through the Internet are presented in three parts Overview and General Issues New Approaches Computability and Form vs Meaning This brainstorming publication presents analyses of core ideas that will possibly shape future AI There has been tried to include critical papers representing different positions on these issues Submissions were invited through the Internet in all subareas and on all aspects of AI research and its new directions especially the current state positions and true advances achieved in the last 5 10 years in various subfields of AI as opposed to parametric improvements the trends perspectives and foundations of artificial and natural intelligence and strong AI vs weak AI and the reality of most current typical publications in AI

Artificial intelligence and the future of the internal audit function Ph Zygoulis, 2024-09-02 Seminar paper from the year 2024 in the subject Business economics Revision Auditing grade A language English abstract This review work makes significant contributions to both theoretical and practical areas For theory it identifies unexplored study areas research gaps hence influencing future research orientations and theoretical underpinnings Furthermore this review contributes to the development of a theoretical framework CACS which will help stakeholders comprehend and conceptualize the use of AI in the IAF and can serve as a foundation for future research In reality this study assists internal auditors in assessing and understanding the possible benefits and risks of using AI in their organization's IAF

Machine Ethics and Robot Ethics Wendell Wallach, Peter Asaro, 2020-09-10 Once the stuff of science fiction recent progress in artificial intelligence robotics and machine learning means that these rapidly advancing technologies are finally coming into widespread use within everyday life Such rapid development in these areas also brings with it a host of social political and legal issues as well as a rise in public concern and academic interest in the ethical challenges these new technologies pose This volume is a collection of scholarly work from leading figures in the development of both robot ethics and machine ethics it includes essays of historical significance which have become foundational for research in these two new areas of study as well as important recent articles The research articles selected focus on the control and governance of computational systems the exploration of ethical and moral theories using software and robots as laboratories or simulations inquiry into the necessary requirements for moral agency and the basis and boundaries of rights and questions of how best to design systems that are both useful and morally sound Collectively the articles ask what the practical ethical and legal issues arising from the development of robots will be over the next twenty years and how best to address these future considerations

Artificial Intelligence and Neural Networks Vasant Honavar, Leonard Merrick Uhr, 1994 A growing body of research focuses on how the strengths of traditional artificial intelligence and neural networks can be incorporated into systems that include the best features of both Artificial Intelligence and Neural Networks Steps toward Principled Integration provides readers with a critical examination of the key issues underlying assumptions and relevant suggestions related to the reconciliation and principled integration of artificial intelligence and neural networks into successful hybrid systems A comprehensive introduction to the basics of symbol processing and connectionist networks and their integration gives readers the necessary background to understand each network system Numerous examples of the integration of artificial and neural networks for a variety of specific applications including vision and pattern recognition illustrate the exciting possibilities and actualities of the resultant hybrid systems With contribution from some of the leading researchers in the field this book offers a unique view into this evolving area Back cover

Artificial Intelligence Derek Partridge, 1986

Artificial Intelligence and the Sociology of Knowledge András Kertész, 1993 A central topic of the latest research in the philosophy of science is the question of what kind of relationship there is between the cognitive and social factors which underlie scientific knowledge At present this problem has manifested itself in a heated and still unfinished controversy between the proponents of artificial intelligence research and the sociologists of knowledge By resolving the antagonism of these two positions the book aims at developing a modular approach to an integrated philosophy of science which can handle the interaction between cognitive and social factors in a way which differs considerably from all current proposals
