**Coronal Holes and High Speed Wind Streams** Jack B. Zirker,1977 *Coronal Holes and high speed wind streams*  
Jack B. Zirker,1977 **Solar Wind Acceleration in Coronal Holes. [High Speed Solar Wind Streams].** ,1978 Past attempts to explain the large solar wind velocities in high speed streams by theoretical models of the expansion have invoked either extended nonthermal heating of the corona heat flux inhibition or direct addition of momentum to the expanding coronal plasma Several workers have shown that inhibiting the heat flux at low coronal densities is probably not adequate to explain quantitatively the observed plasma velocities in high speed streams It stressed that in order to account for both these large plasma velocities and the low densities found in coronal holes from which most high speed streams are believed to emanate extended heating by itself will not suffice One needs a nonthermal mechanism to provide the bulk acceleration of the high wind plasma close to the sun and the most likely candidate at present is direct addition of the momentum carried by outward propagating waves to the expanding corona Some form of momentum addition appears to be absolutely necessary if one hopes to build quantitatively self consistent models of coronal holes and high speed solar wind streams Correlation of High Latitude Coronal Holes with Solar Wind Streams High Above Or Below the Ecliptic Kile B. Baker,Michael D. Papagiannis,BOSTON UNIV MA DEPT OF ASTRONOMY.,1980 This report has correlated the positions of high latitude coronal holes as determined from the Helium 10830 A spectroheliograms with the velocities of solar wind streams high above or below the ecliptic which could have originated from the same positions as the coronal holes The solar wind speeds were determined from interplanetary scintillation IPS measurements made at the University of California at San Diego and at the Toyokawa Observatory in Japan The correlation covered the two and a half year period January 1 1977 to June 30 1979 during which there were no large equatorial coronal holes present since we were approaching solar maximum We have found that these high latitude coronal holes are often but not always correlated to high speed solar wind streams The lack of a clearer correlation can be attributed to uncertainties in the solar wind velocities obtained from IPS measurements to uncertainties in the exact boundaries of the coronal holes and to the deflection or attenuation of relatively weak solar wind streams in interplanetary space Comic Rays in Interplanetary Magnetic Fields I.N. Toptygin,2012-12-06 Fast particles of natural or1g1n cosmic rays have been used for a long time as an important source of astrophysical and geophysical information A study of cosmic ray spectra time variations abundances gradients and anisotropy provides a wealth of data on physical conditions in the regions of cosmic ray generation as well as in the media through which cosmic rays propagate Astrophysical aspects of cosmic ray physics have been considered in a number of monographs The most detailed seems to be *The Origin of Cosmic Rays* by V L Ginzburg and S I Syrovatskij 1964 which is however concerned mainly with galactic cosmic rays The physics of the circumsolar space is discussed in this book only rather briefly Several other monographs have been devoted mostly to the physics of the interplanetary medium and cosmic rays in interplanetary space These include the

books by Dorman 1963 1975a b Parker 1963 Dorman and Miroshnichenko 1968 The present monograph differs from the above mentioned books in two main aspects i It presents a unified theoretical approach to analys ng the properties of fast particles in interplanetary space based upon consideration of cosmic rays as a highly energetic component of the interplane ary plasma which makes use of the plasma physics methods to describe the behaviour of cosmic rays **Literature 1979, Part 1** Siegfried Böhme,Ute Esser,Professor Dr. Walter Fricke,Inge Heinrich,Wilfried Hofmann,Dietlinde Krahn,Dorothea Rosa,Dr. Lutz D. Schmadel,Gert Zech,2013-04-18 **The New Solar Physics** John Allen Eddy,2019-09-06 Our concepts of the sun have been altered by four new developments the discovery of apparent global solar oscillations an unsettled and unsettling deficit of neutrinos from the center of the sun a new elucidation of the role of solar wind and some disturbing historical facts that shake old concepts of solar constancy and regularity This volume brings together summaries of these four developments in solar physics written by the four scientists whose work has prompted our new assessment of the sun

**Sun-Earth Plasma Connections** James L. Burch,Robert L. Carovillano,Spiro K. Antiochos,1999-01-26 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 109 The Sun and the terrestrial magnetosphere have been the subjects of active research since the dawn of the space age The capabilities of observing both systems with greater and greater detail evolved separately until the 1980s when it was realized that definitive results on the connection between the Earth and the Sun would require a concerted and joint effort It was also realized that sophisticated solar terrestrial research communities existed within all the space faring nations of the world and that no one of them could launch such an effort by itself This realization led to the creation of the International Solar Terrestrial Physics ISTEP program which now comprises at least 12 spacecraft and includes extensive ground based observations and theory and modeling efforts *Solar Wind Seven* E. Marsch,2016-04-20 The third COSPAR Colloquium entitled Solar Wind Seven was held in Goslar Germany in September 1991 Twenty two countries were represented by scientists many of whom are leading experts in the area of heliospheric physics The Proceedings reflect current research on solar wind and particularly emphasizes the source regions The main topics covered encompass Coronal Heating and Solar Wind Acceleration Large Scale Structure of the Interplanetary Medium Minor Ions Neutrals and Cosmic Rays in the Heliosphere Kinetic Physics Waves and Turbulence and finally Heliospheric Dynamic Phenomena Solar Interior and Atmosphere Arthur N. Cox,2018-01-30 Observational data derived from the world s largest solar telescopes are correlated with theoretical discussions in nuclear and atomic physics by contributors representing a wide range of interests in solar research **Literature 1977, Part 2** Siegfried Böhme,Ute Esser,Walter Fricke,Inge Heinrich,Dietlinde Krahn,Lutz D. Schmadel,Gert Zech,2013-03-14 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is de voted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International

Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 20 contains literature published in 1977 and received before February 20 1978 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J BouSka Prague who surveyed journals and publications in Czech and supplied us with abstracts in English and by Prof P Brosche Bonn who supplied us with literature concerning some border fields of astronomy

**Physics of the Sun** P.A. Sturrock,1986 This volume together with its two companion volumes originated in a study commissioned by the United States National Academy of Sciences on behalf of the National Aeronautics and Space Administration A committee composed of Tom Holzer Dimitri Mihalas Roger Ulrich and myself was asked to prepare a comprehensive review of current knowledge concerning the physics of the sun We were fortunate in being able to persuade many distinguished scientists to gather their forces for the preparation of 21 separate chapters covering not only solar physics but also relevant areas of astrophysics and solar terrestrial relations It proved necessary to divide the chapters into three separate volumes that cover three different aspects of solar physics Volumes I and III are concerned with The Solar Interior and with Astrophysics and Solar Terrestrial Relations This volume devoted to The Solar Atmosphere covers not only the chromosphere and corona but also the principal phenomena usually referred to as solar activity The emphasis is on identifying and analyzing the relevant physical processes but each chapter also contains a great deal of descriptive material
