Demography In Ecotoxicology:

Demography in Ecotoxicology Jan Kammenga, Ryszard Laskowski, 2000-12-19 Demography in Ecotoxicology focuses on the interface between toxicology life history and demographic theory This comprehensive book examines the different ways of adequately assessing the potential impact of toxic stress on populations and discusses how to obtain an insight into the underlying physiological and genetic mechanisms The theory is illustrated with empirical observations on a number of species and organisational levels and the book incorporates case studies real data life history models methodologies and recommendations for risk assessment Written by an international team of researchers Demography in Ecotoxicology will be invaluable to ecotoxicologists ecologists and wildlife conservationists in academia industry and regulatory bodies wishing to gain a greater understanding into the prediction and effects of natural and man made toxicants on populations

Demographic Toxicity H. Resit Akcakaya, John D. Stark, Todd S. Bridges, 2008-04-25 This edited volume collects population and metapopulation models for a wide variety of species focusing on the use of models in population level risk assessment for toxins Each chapter of Demographic Toxicity describes the application of a population model to one species with the aim of demonstrating how various life history characteristics of the species are incorporated into the model how ecotoxicological impacts are modeled and how the results of the model has been or can be used in risk assessment The model in each chapter is implemented in RAMAS software which uses matrix modeling of population dynamics RAMAS software is believed to be the most powerful tool ever invented for this task Demographic Toxicity includes a CD that contains a demo version of the program and the data files for each species The book explains how to use these specific tools for modeling analysis and interpretation of data Demographic Toxicity provides a major review of current knowledge on population dynamics in different species representing both terrestrial and aquatic environments

Statistics in Ecotoxicology Tim Sparks, 2000-02-08 Statistics in Ecotoxicology Edited by Tim Sparks Institute of Terrestrial Ecology Cambridgeshire UK A basic understanding of statistical concepts and methodology is essential for every research scientist Statistics in Ecotoxicology is a comprehensive well illustrated text tailored to meet the needs of all ecotoxicologists from undergraduates to professionals Avoiding mathematical jargon the book uses worked examples to enable the reader to understand the potential of and limitations of statistical analysis in both the planning and operation of laboratory and field ecotoxicological experiments This informative and highly practical guide provides an invaluable introduction to the quantitative methods for the analysis of ecotoxicological data covers field experimentation laboratory experimentation regression methodology multivariate methods and monitoring incorporates essential tips to prevent many of the common design and analytical failings in ecotoxicology and includes case studies comprising of terrestrial freshwater and marine examples Written by an international team of scientists Statistics in Ecotoxicology will be essential reading for all ecotoxicologists

Sensitivity Analysis: Matrix Methods in Demography and Ecology Hal Caswell, 2019-04-02 This open access book shows how to use sensitivity analysis in

demography It presents new methods for individuals cohorts and populations with applications to humans other animals and plants The analyses are based on matrix formulations of age classified stage classified and multistate population models Methods are presented for linear and nonlinear deterministic and stochastic and time invariant and time varying cases Readers will discover results on the sensitivity of statistics of longevity life disparity occupancy times the net reproductive rate and statistics of Markov chain models in demography They will also see applications of sensitivity analysis to population growth rates stable population structures reproductive value equilibria under immigration and nonlinearity and population cycles Individual stochasticity is a theme throughout with a focus that goes beyond expected values to include variances in demographic outcomes The calculations are easily and accurately implemented in matrix oriented programming languages such as Matlab or R Sensitivity analysis will help readers create models to predict the effect of future changes to evaluate policy effects and to identify possible evolutionary responses to the environment Complete with many examples of the application the book will be of interest to researchers and graduate students in human demography and population biology The material will also appeal to those in mathematical biology and applied mathematics

Ecotoxicology of Wild Mammals Richard F. Shore, Barnett A. Rattner, 2001-04-25 This landmark book which contains contributions from the world's foremost mammalian ecotoxicologists is a truly impressive summary of research undertaken in this field in recent years It is also the first book to draw such information together in a seamless and unified approach In examining the exposure and effects of environmental contaminants in wild mammal populations this book addresses four core questions What exactly do we know about environmental contaminants in wild mammals What are the commonalities and differences between mammal orders species in the effects that contaminants have How and to what degree of accuracy can we predict the adverse effects of environmental contaminants on mammalian wildlife How significant are contaminant insults compared with other density independent and dependent factors such as habitat loss climatic factors and disease The key underlying scientific principles and issues raised by the team of international authors will have significance throughout the world making this an invaluable book not only for all those studying the effects of environmental pollutants on mammals but also on regulatory agencies and those carrying out environmental impact assessment

Environmental Toxicology and Chemistry, 2006 **Forecasting the Environmental Fate and Effects of Chemicals** P. S. Rainbow, Steve P. Hopkin, Mark Crane, 2001-05-25 The book is the first book to address specifically the issue of forecasting in environmental toxicology and chemistry from a methodological regulatory and practical perspective

Encyclopedia of Environmetrics Abdel H. El-Shaarawi, Walter W. Piegorsch, 2001-12-31 A comprehensive overview of environmetric research and its applications Environmetrics covers the development and application of quantitative methods in the environmental sciences It provides essential tools for understanding predicting and controlling the impacts of agents both man made and natural which affect the environment Basic and applied research in this area covers a broad range of topics Primary among these are the quantitative sciences

such as statistics probability and applied mathematics chemometrics and econometrics Applications are also important for example in ecology and environmental biology public health atmospheric science geology engineering risk management and regulatory governmental policy amongst others Divided into 12 sections the Encyclopedia brings together over 600 detailed articles which have been carefully selected and reviewed through the collaborative efforts of the Editors in Chief and the appropriate Section Editor Presented in alphabetical order all the articles will include an explanatory introduction extensive cross referencing and an up to date bibliography providing literature references for further reading Presenting state of the art information in a readable highly accessible style the scope and coverage provided by the Encyclopedia of Environmetrics will ensure its place as the landmark reference for the many scientists educators and decision makers working across this multidisciplinary field An essential reference tool for university libraries research laboratories government institutions and consultancies concerned with the environmental sciences the Encyclopedia of Environmetrics brings together for the first time comprehensive coverage of the full range of topics techniques and applications covered by this multidisciplinary field There is currently no central reference source which addresses the needs of this multidisciplinary community This new Encyclopedia will fill this gap by providing a comprehensive source of relevant fundamental concepts in environmetric research development and applications for statisticians mathematicians economists environmentalists ecologist government officials and policy makers

Reviews of Environmental Contamination and Toxicology 164 George W.

Ware,2000-03-23 Reviews of Environmental Contamination and Toxicology provides detailed review articles concerned with aspects of chemical contaminants including pesticides in the total environment with toxicological considerations and consequences

Encyclopedia of Toxicology Philip Wexler,Bruce D. Anderson,2005 The Encyclopedia of Toxicology second edition continues its comprehensive survey of toxicology This new edition presents entries devoted to specific chemicals the international scope of organizations included has been broadened and articles describing a number of well known toxic related incidents such as Chernobyl and Three Mile Island are included Along with the traditional scientifically based entries new articles focus on the societal implications of toxicological knowledge including environmental crimes chemical and biological warfare in ancient times and a history of the U S environmental movement With more than 1150 entries this second edition has been expanded in length breadth and depth and provides an extensive overview of the many facets of toxicology Midwest

Acta ornithologica ,1999 *Science* ,2011 **Structure and Dynamics of the Pacific Upper Mantle** Rafael Katzman,1998 A new tomographic technique is employed to investigate the structure and dynamics of the Pacific upper mantle We invert frequency dependent travel times residuals of three component turning and surface waves such as S SS SSS R1 and G1 together with band center travel times of ScS reverberations for the 2D composite structure in the plane of

two Pacific corridors The model parameters include shear speed variations throughout the mantle perturbations to radial shear wave anisotropy in the uppermost mantle and the topography of the 410 and 660 discontinuities The image for the first corridor between Tonga and Oahu Hawaii reveals a harmonic pattern of highs and lows having an upper mantle thickness a horizontal wavelength of 1500 km and an amplitude of 3% High shear velocities underlie each of three northwest trending geoid swells downstream from the major hotspots of the Society Marquesas and Hawaiian Islands The result along the second corridor from Oahu and Ryukyu also exhibits a prominent fast region that extends beneath the entire Hawaiian swell down to depth of 200 300 km It is therefore implied that the topography of the swells in the central Pacific is supported by a chemical buoyancy mechanism and not by thermal buoyancy Upper mantle convective rolls may account for the depth extent of the fast anomalies beneath the swells **Water 21** ,1999 **Ecology** ,1996 American Book Publishing Record ,2001
