Introduction to Cellular Signal Transduction Ari Sitaramayya, 2012-12-06 Our understanding of biological communication has grown significantly during the past decade The advances in knowledge about the chemical nature of signals and their corresponding reception by specialized cells have led to identification characterization purification cloning and expression of specific receptor molecules While the earlier literature emphasized compartmentalized treatment of informational molecules and their interaction with receptors the progress in the recent past has allowed cross fertilization in the examination of the of actions and mechanisms of steroid and protein hormones and other messengers Investigators now have an increased appreciation of the multiple effects of specific hormones and of the diverse responses by receptor proteins to closely related ligands The task of compiling this enormous literature into a focused treatise was undertaken with the launching of the series *Hormones in Health and Disease* This latest volume *An Introduction to Cellular Signal Transduction* complements the previous monographs in the series and brings to the fore recent developments in the field of biochemical communication This volume combines discussions on the basic tenets of the signal transduction process and its relevance to health and disease While various chapters provide exhaustive dissection of specific topics for researchers in the field the book is also an excellent vehicle for introducing students and new investigators to the subject The contributors of the chapters are active and accomplished scientists brought together on a common platform by the editor Dr

Regulatory Properties of the Mammalian Adenylyl Cyclases Zhengui Xia,1996

Transmembrane Receptors and Channels A.G. Lee,1997-03-11 Volume 6 of Biomembranes covers transmembrane receptors and channels A particularly important role for the membrane is that of passing messages between a cell and its environment Part I of this volume covers receptors for hormones and growth factors Here as in so many other areas of cell biology the application of the methods of molecular biology have led to the recognition of a number of families of receptors Typically such receptors contain an extracellular ligand binding domain a transmembrane domain and an intracellular catalytic domain whose activation as a result of ligand binding leads to generation of second messengers within the cell and stimulation of a range of cytosolic enzymes An alternative signaling strategy exploited in particular in the nervous system is to use ion channels to allow

controlled movement of monovalent Na K or divalent Ca² cations in or out of the cell resulting in changes in membrane potential or alterations in the intracellular concentration of Ca² Part II of this volume is concerned with these ion channels and with other often simpler ion channel systems whose study can throw light on channel mechanism

G

Protein-Coupled Receptors Sandra Siehler, Graeme Milligan, 2010-09-30 Provides a comprehensive overview of recent discoveries and current understandings of G protein coupled receptors GPCRs Recent advances include the first mammalian non rhodopsin GPCR structures and reconstitution of purified GPCRs into membrane discs for defined studies novel signaling features including oligomerization and advances in understanding the complex ligand pharmacology and physiology of GPCRs in new assay technologies and drug targeting The authors take time to detail the importance of the pathophysiological function and drug targeting of GPCRs specifically adrenoceptors in cardiovascular and respiratory diseases metabotropic glutamate receptors in CNS disorders S1P receptors in the immune system and Wnt Frizzled receptors in osteoporosis This book will be invaluable to researchers and graduate students in academia and industry who are interested in the GPCR field
