Improving Working Memory in Learning and Intellectual Disabilities Silvia Lanfranchi,Barbara
Carretti,2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for
understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and
reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For
instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual
disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and
everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding
of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote
changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of
the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most
studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer
effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated
are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single
tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of
WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being
drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the
educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of
research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals
with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population
Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and
ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such

Masters Abstracts International ,1996 Depression in Children Bernice T. Naylor,2009 Depressive disorders which include major depressive disorder unipolar depression dysthymic disorder chronic mild depression and bipolar disorder manic depression can have far reaching effects on the functioning and adjustment of young people Among both children and adolescents depressive disorders confer an increased risk for illness and interpersonal and psychosocial difficulties that persist long after the depressive episode is resolved in adolescents there is also an increased risk for substance abuse and suicidal behavior Unfortunately these disorders often go unrecognized by families and physicians alike Signs of depressive disorders in young people often are viewed as normal mood swings typical of a particular developmental stage In addition

health care professionals may be reluctant to prematurely label a young person with a mental illness diagnosis Yet early diagnosis and treatment of depressive disorders are critical to healthy emotional social and behavioral development This new book presents the latest research in the field across a wide spectrum of countries **Applied Psycholinguistics** ,2004
