Advanced Ceramic Tools for Machining Application - III I.M. Low,1997-09-08 Recent advances in ceramic science and technology have given rise to a new generation of high performance ceramic cutting tools which have an improved strength hardness toughness wear resistance thermal shock resistance and creep strength These advances have resulted in better workpiece quality improved tool life or reliability lower production costs improved productivity and have facilitated the machining of new or special alloys Advanced Ceramic Tools for Machining Application - II Xing Sheng Li,It-Meng Low,1996 In the wake of the rapid progress made in ceramic science in recent years advanced ceramic tools with superior mechanical properties have been developed giving improved productivity lower production costs and better workpiece quality An introduction to the history evolution material properties wear and fracture processing technologies and performance of various advanced ceramic tools has already been covered in Advanced Ceramic Tools for Machining Application II **Advanced Ceramic Tools for Machining Application - I** Xing Sheng Li,It Meng Low,1994-09-14 Advanced ceramic tools represent the latest development of cutting tools used for machining and their application has greatly improved productivity Ceramic Materials Philippe Boch,Jean-Claude Nizpce,2010-01-05 This book is primarily an introduction to the vast family of ceramic materials The first part is devoted to the basics of ceramics and processes raw materials powders synthesis shaping and sintering It discusses traditional ceramics as well as technical ceramics both oxide and non oxide which have multiple developments The second part focuses on properties and applications and discusses both structural and functional ceramics including bioceramics The fields of abrasion cutting and tribology illustrate the importance of mechanical properties It also deals with the questions answers of a ceramicist regarding electronuclear technology As chemistry is an essential discipline for ceramicists the book shows in particular what soft chemistry can contribute as a result of sol gel methods Advanced Ceramic Tools for Machining Application Xing Sheng Li,It-Meng Low,1998 Recent advances in ceramic science and technology have given rise to a new generation of high performance ceramic cutting tools which have an improved strength hardness toughness wear resistance thermal shock resistance and creep strength These advances have resulted in better workpiece quality improved tool life or reliability lower production costs improved productivity and have facilitated the machining of new or special alloys **Advanced Ceramic Tools for Machining Application** Xing Sheng Li,It-Meng Low,1994 Advanced ceramic tools represent the latest development of cutting tools used for machining and their application has greatly improved productivity This book aims to introduce the fundamentals and skills necessary for effective application of the tools **High Performance Non-Oxide Ceramics II** M. Jansen,2003-08-25 The nitrides and carbides of boron and silicon are proving to be an excellent choice when selecting materials for the design of devices that are to be employed under particularly demanding environmental and thermal conditions The high degree of cross linking due to the preferred coordination numbers of the predominantly covalently bonded

constituents equalling or exceeding three lends these non oxidic ceramics a high kinetic stability and is regarded as the microscopic origin of their impressive thermal and mechanical durability Thus it does not come as a surprise that the chemistry the physical properties and the engineering of the corresponding binary ternary and even quaternary compounds have been the subject of intensive and sustained efforts in research and development In the five reviews presented in the volumes 101 and 102 of Structure and Bonding an attempt has been made to cover both the essential and the most recent advances achieved in this particular field of materials research The scope of the individual contributions is such as to address both graduate students specializing in ceramic materials and all scientists in academia or industry dealing with materials research and development Each review provides in its introductory part the chemical physical and to some extent historical background of the respective material and then focuses on the most relevant and the most recent achievements
