Adaptive Data Compression:

Adaptive Data Compression Ross N. Williams, 2013-02-13 Following an exchange of correspondence I met Ross in Adelaide in June 1988 I was approached by the University of Adelaide about being an external examiner for this dissertation and willingly agreed Upon receiving a copy of this work what struck me most was the scholarship with which Ross approaches and advances this relatively new field of adaptive data compression This scholarship coupled with the ability to express himself clearly using figures tables and incisive prose demanded that Ross s dissertation be given a wider audience And so this thesis was brought to the attention of Kluwer The modern data compression paradigm furthered by this work is based upon the separation of adaptive context modelling adaptive statistics and arithmetic coding This work offers the most complete bibliography on this subject I am aware of It provides an excellent and lucid review of the field and should be equally as beneficial to newcomers as to those of us already in the field

Adaptive Data Compression Ross Neil Williams, 1993 On Implementing Two Adaptive Data Compression Schemes Tampereen yliopisto. Dept. of Computer Science, Erkki Mäkinen, 1989 Abstract We discuss the implementation of two locally adaptive data compression methods called the transpose and interval coding It is found out that the implementations are extremely efficient compared to other similar methods Moreover errors are less catastrophic to these methods than to most adaptive compression schemes

Newbury, European Space Agency, 1991 *Source Coding and Adaptive Data Compression for Communication Networks* Howard Steven Nussbaum, 1976 Coding under a fidelity criteria of a class of sources which emit randomly occurring messages is investigated This class of sources models information carrying processes entering into communication networks Messages emitted by computer terminals teletypes vocoders and other such devices serve as actual examples For this class of sources the rate distortion function is derived and source coding and converse source coding theorems are proven Employing these theorems an operational definition of the rate distortion function in terms of message queueing delay and transmission delay is presented This definition relates the rate distortion function with the message network delay which is an important measure of performance of a communication network Also for such a class of sources which emit randomly

occurring messages an adaptive data compression scheme is investigated This scheme utilizes observations of the network congestion to determine the amount of compression a message receives with the object of minimizing the message delay for a given distortion level *An Adaptive Technique for Data Compression and Robustness at the Tactical Edge*,2010 An adaptive technique for reliable and fast transmission of streaming data at the tactical edge is presented This technique combines data compression and data robustness to optimize for BW reliability and speed of transmission in an adaptive matter Speed of transmission and reducing BW needed for transmission is achieved by exploring lossless data compression of the payloads of the packet stream Once all redundancy in the packet stream is removed a packet erasure based FEC is applied that further optimize for BW and speed of transmission in addition to adding robustness to the packet stream that assures successful transmission within a speed of service given by tactical requirements Lossless compression uses an adaptive Arithmetic Coding technique that provides a level of data compression close to theoretical limits approaching the Shannon Bound and does not require any prior knowledge of the statistical nature of the packet payload stream performs compression on the fly The FEC uses an RS code that can work over a general purpose process does not require specific HW and optimizes for the amount of redundancy needed Robustness is achieved in the presence of high percentage of packet erasures caused by blockage fading or malicious attack The presented approach guarantees the delivery of a given message within a speed of service defined by tactical requirements and minimizes the BW needed for transmission The paper presents the technique shows supporting analysis and presents simulation results **Adaptive Data Compression System Study**

A Model-adaptive Universal Data Compression Architecture with Applications to Image Compression Joshua Ka-Wing Lee,2017 In this thesis I designed and implemented a model adaptive data compression system for the compression of image data The system is a realization and extension of the Model Quantizer Code Separation Architecture for universal data compression which uses Low Density Parity Check Codes for encoding and probabilistic graphical models and message passing algorithms for decoding We implement a lossless bi level image data compressor as well as a lossy greyscale image compressor and explain how these compressors can rapidly adapt to changes in source models We then show using these implementations that Restricted Boltzmann Machines are an effective source model for compressing image data compared to other compression methods by comparing compression performance using these source models on various image datasets
