Domain Of Images:

The Domain of Images James Elkins,1999 In the domain of visual images those of fine art form a tiny minority This original and brilliant book calls upon art historians to look beyond their traditional subjects painting drawing photography and printmaking to the vast array of nonart images including those from science technology commerce medicine music and archaeology Such images James Elkins asserts can be as rich and expressive as any canonical painting Using scores of illustrations as examples he proposes a radically new way of thinking about visual analysis one that relies on an object s own internal sense of organization Elkins begins by demonstrating the arbitrariness of current criteria used by art historians for selecting images for study He urges scholars to adopt instead the far broader criteria of the young field of image studies After analyzing the philosophic underpinnings of this interdisciplinary field he surveys the entire range of images from calligraphy to mathematical graphs and abstract painting Throughout Elkins blends philosophic analysis with historical detail to produce a startling new sense of such basic terms as pictures writing and notation

Generative Adversarial Networks for Image Generation Xudong Mao,Qing Li,2021-02-17 Generative adversarial networks GANs were introduced by Ian Goodfellow and his co authors including Yoshua Bengio in 2014 and were to referred by Yann Lecun Facebook s AI research director as the most interesting idea in the last 10 years in ML GANs potential is huge because they can learn to mimic any distribution of data which means they can be taught to create worlds similar to our own in any domain images music speech prose They are robot artists in a sense and their output is remarkable poignant even In 2018 Christie s sold a portrait that had been generated by a GAN for 432 000 Although image generation has been challenging GAN image generation has proved to be very successful and impressive However there are two remaining challenges for GAN image generation the quality of the generated image and the training stability This book first provides an overview of GANs and then discusses the task of image generation and the details of GAN image generation It also investigates a number of approaches to address the two remaining challenges for GAN image generation Additionally it explores three promising applications of GANs including image to image translation unsupervised domain adaptation and GANs for security This book appeals to students and researchers who are interested in GANs image generation and general machine learning and computer vision

Recent Advances in Logo Detection Using Machine Learning Paradigms Yen-Wei Chen, Xiang Ruan, Rahul Kumar Jain, 2024-05-30 This book presents the current trends in deep learning based object detection framework with a focus on logo detection tasks. It introduces a variety of approaches including attention mechanisms and domain adaptation for logo detection and describes recent advancement in object detection frameworks using deep learning. We offer solutions to the major problems such as the lack of training data and the domain shift issues. This book provides numerous ways that deep learners can use for logo recognition including: Deep learning based end-to-end trainable architecture for logo detection; Weakly supervised logo recognition approach using attention mechanisms; Anchor-free logo detection framework combining attention mechanisms to precisely locate logos in the real world images; Unsupervised logo detection that takes into account domain shift issues from synthetic to real world images; Approach for logo detection modeling domain adaptation task in the context of weakly supervised learning to overcome the lack of object level annotation problem. The merit of our logo recognition technique is demonstrated using experiments, performance evaluation, and feature distribution analysis utilizing different deep learning frameworks. The book is directed to professors, researchers, practitioners in the field of engineering, computer science, and related fields, as well as anyone interested in using deep learning techniques and applications in logo and various object detection tasks.

Genetics? No Problem! Kevin O'Dell, 2017-03-20 Shortlisted for the HE Bioscience Teacher of the Year Award 2019. Kevin O'Dell, Author of *Genetics No Problem*. The analysis and interpretation of data is fundamental to the subject of genetics and forms a compulsory part of the undergraduate genetics curriculum. Indeed, the key skills that a genetics student requires are an ability to design and understand experimental strategies and to use problem-solving skills to interpret experimental results and data. *Genetics No Problem* provides students with a graded set of problems that aim to enthuse, challenge, and entertain the reader. The book is divided into three sections: introductory, intermediate, and advanced, each with 10 problems. For first

level students there will be short genetics problems embedded in a wide range of scenarios such as murder mysteries As the book progresses the stories will get longer and the science will get progressively more complex to challenge final year students and enable the reader to identify genetic disease in obscure organisms as well as designing and testing treatments and cures Genetics No Problem Takes a unique innovative approach that provides students with a set of graded problems designed to develop both their skills and their ability to tackle problems with confidence Includes problems embedded in a narrative written in an interesting informative and entertaining style by an Author with a proven track record in teaching research and communication Is well illustrated in full colour throughout The book will prove invaluable to all students of genetics across a range of disciplines needing to get to grips with the analysis and interpretation of data that is fundamental to the subject
