## **Doing Library Research:**

Doing Library Research Robert K. Baker, 2019-03-13 Many college students remain puzzled by card catalogs can't find books they need and fail to use many of the important resources of the library despite tours, explanations, and much assistance from librarians. In this book, a community college librarian provides the direction students need to utilize the resources typically found in a community college.

**Checklists for Doing Library Research and Reporting** Daniel Chung S. Cheng, 2009-11 Who should do library research and reporting? This book, *Checklists for Doing Library Research and Reporting*, is written primarily for those beginning college students who are doing library research and reporting for the first time. It has been planned to free the students from uncertainties and to give them confidence in their own assignment by giving them a clear understanding of the basic sources and fundamental principles underlying good research and writing. What this book is all about: The ultimate goal of this guide is to help students become successful and independent college researchers and research writers. To achieve this goal, the best way to learn how is from those source writers cited in this book and what they have said or written about research and academic writing. This book is a road map to scholarly research and writing, a way to reach the ultimate goal. The book of checklists is a result of the author's intensive research and a compilation of other experts' concepts, ideas, and research techniques aimed at information finding and research writing. Parts 1-5 of this book deal with basic library research techniques; parts 6-9 discuss advanced library research techniques. This book should be useful in the following different ways: 1) it works as a pool of guidelines, methods, and procedures selected from various sources on research and writing not available in a single document; 2) it serves as a resource guide that will allow students to choose and use library materials at their own rate; 3) it works as an information consultant or guardian to the individual who will constantly do library research and reporting; 4) it offers as a supplementary aid that constitutes four books in one: a) an introduction to research, b) educational research, c) access to information, and d) research and report writing; 5) it helps students learn and gain research and writing skills. More importantly, the students can use this guide and checklist alone where no instructor is available. After studying this text checklist, the students will be able to comprehend the information given by the experts in this book and add their own ideas to create the best possible results of their own tasks.

**The Elements of Library Research** Mary W. George, 2008-08-11 A lively, succinct, and readable introduction to conducting academic research from devising research questions to evaluating sources and more. Joseph Harris, Duke University. To do solid academic research, college students need to look beyond the computer search engine. This short, practical book introduces students to the important components of the information-seeking process. *The Elements of Library Research* provides a foundation for success in any research assignment, from a freshman paper to a senior thesis. Unlike guides that describe the research process but do not explain its logic, this book focuses entirely on basic concepts, strategies, tools, and tactics for research in both electronic and print formats. Drawing on decades of experience with undergraduates, reference librarian Mary George

arms students with the critical thinking skills and procedures they need to approach any academic project with confidence  
Ways to turn a topic into a research question Techniques for effective online searches How to evaluate primary and secondary sources When and how to confer with reference librarians and faculty How to avoid plagiarism Glossary of key terms from Boolean search to peer review Checklists timelines and hints for successful research projects

**Library Research Models** Thomas Mann,1993 Most researchers even with computers find only a fraction of the sources available to them As Library of Congress reference librarian Thomas Mann explains researchers tend to work within one or another mental framework that limits their basic perception of the universe of knowledge available to them Some for example use a subject disciplinary method which leads them to a specific list of sources on a particular subject But Mann points out while this method allows students and researchers to find more specialized sources it is also limiting they may not realize that works of interest to their own subject appear within the literature of many other disciplines A researcher looking through anthropology journals for example might not discover that the MLA International Bibliography provides the best coverage of folklore journals In Library Research Models Mann examines the several alternative mental models people use to approach the task of research and demonstrates new more effective ways of finding information Drawing on actual examples gleaned from 15 years experience in helping thousands of researchers he not only shows the full range of search options possible but also illuminates the inevitable tradeoffs and losses of access that occur when researchers limit themselves to a specific method In two chapters devoted to computers he examines the use of electronic resources and reveals their value in providing access to a wide range of sources as well as their disadvantages what people are not getting when they rely solely on computer searches why many sources will probably never be in databases and what the options are for searching beyond computers Thomas Mann s A Guide to Library Research Methods was widely praised as a definitive manual of library research Ronald Gross author of The Independent Scholar s Handbook called it the savviest such guide I have ever seen bracingly irreverent and brimming with wisdom The perfect companion volume Library Research Models goes even further to provide a fascinating look at the ways in which we can most efficiently gain access to our vast storehouses of knowledge

How to Do Library Research Robert Bingham Downs,Elizabeth Crooks Downs,1966 The No-nonsense Guide to Research Support and Scholarly Communication Claire Sewell,2020-01-07 This accessible and highly practical book provides an introductory guide to the world of research support in the academic library Academic libraries have seen huge changes in recent years thanks to the increasing availability of information online but they are now undergoing another shift As libraries move away from providing access to existing information and towards helping users create new knowledge there is an opportunity for them to develop new services for the research community To do this successfully libraries need to have a knowledgeable workforce who are equipped to provide the support that researchers need Information professionals are

increasingly being asked to advise their users on issues such as open access and research data management but are often doing so with little or no formal preparation Outlining the reasons why library staff need to develop a knowledge of research support and guiding them through the key information on each topic The No nonsense Guide to Research Support and Scholarly Communication provides an ideal primer for those who seek to work in this area or those who have acquired these responsibilities as part of a wider role The practical nature of the book means readers can dip into it or read it from cover to cover as needed It includes practical checklists of knowledge and skills international case studies by practitioners from around the globe end of chapter references how to sections activities and links to freely available online training materials The book covers scholarly communication open research and the research lifecycle research data management open access disseminating research metrics and measuring impact including the Journal Impact Factor H Index and Altmetrics career paths in research support why and how library staff at all levels can get involved in the process of doing research and sharing their outputs The book will be essential reading for academic librarians who have had research support duties added to their role with little or no formal training or those who have taken on a newly created role and are unsure of how best to use their existing skills or develop new ones suitable for a role in research support The book will also be of interest to public librarians who may be dealing with supporting their own research communities and those who are considering taking on a career in this growing area but are unsure where to turn for guidance including students studying for postgraduate library qualifications and those who have undertaken qualifications in publishing Library and Information Research in the United Kingdom Carmel Maguire,1980 The Library and Its Organization Mrs. Gertrude Martha (Gilbert) Drury,1924
