Dominated Operators:

Dominated Operators A.G. Kusraev, 2013-03-09 The notion of a dominated or majorized operator rests on a simple idea that goes as far back as the Cauchy method of majorants. Loosely speaking the idea can be expressed as follows: If an operator equation under study is dominated by another operator equation called a dominant or majorant then the properties of the latter have a substantial influence on the properties of the former. Thus operators or equations that have nice dominants must possess nice properties. In other words an operator with a somehow qualified dominant must be qualified itself. Mathematical tools putting the idea of domination into a natural and complete form were suggested by L. V. Kantorovich in 1935-36. He introduced the fundamental notion of a vector space normed by elements of a vector lattice and that of a linear operator between such spaces which is dominated by a positive linear or monotone sublinear operator. He also applied these notions to solving functional equations. In the succeeding years many authors studied various particular cases of lattice normed spaces and different classes of dominated operators. However research was performed within and in the spirit of the theory of vector and normed lattices. So it is not an exaggeration to say that dominated operators as independent objects of investigation were beyond the reach of specialists for half a century. As a consequence the most important structural properties and some interesting applications of dominated operators have become available since recently.

Finite Sections of Band-Dominated Operators Steffen Roch, 2008 The goal of this text is to review recent advances and to present new results in the numerical analysis of the finite sections method for general band and band dominated operators. The main topics are the stability of the finite sections method and the asymptotic behavior of singular values. The latter topic is closely related with compactness and Fredholm properties of approximation sequences and the paper can also serve as an introduction into this remarkable field of numerical analysis. Further the author discusses the behavior of approximation numbers, determinants, essential spectra and essential pseudospectra as well as the localization of pseudomodes of finite sections of band dominated operators.

Limit Operators and Their Applications in Operator Theory Vladimir Rabinovich, Steffen Roch, Bernd Silbermann, 2012-12-06 This text has two goals. It describes a topic: band and band dominated operators and their Fredholm theory and it introduces a method to study this topic: limit operators. Band dominated operators. Let $H_2 Z$ be the Hilbert space of all squared summable functions $x = \sum_{i \in Z} x_i e_i$ provided with the norm $\|x\|_2 = (\sum_{i \in Z} |x_i|^2)^{1/2}$. It is often convenient to think of the elements x of $H_2 Z$ as two sided infinite sequences $(x_i)_{i \in Z}$. The standard basis of $H_2 Z$ is the family of sequences $e_i = (\delta_{ij})_{j \in Z}$ where $\delta_{ij} = 1$ if $i = j$ and 0 otherwise. Every bounded linear operator A on H can be described by a two sided infinite matrix $(a_{ij})_{i, j \in Z}$ with respect to this basis where $a_{ij} = \langle A e_j, e_i \rangle$. The band operators on H are just the operators with a matrix representation of finite band width: $a_{ij} = 0$ whenever $|i - j| > k$ for some k . Operators which are in the norm closure of the algebra of all band operators are called band dominated. Needless to say that band and band dominated operators appear in numerous branches of mathematics. Archetypal examples come from

discretizations of partial differential operators It is easy to check that every band operator can be uniquely written as a finite sum $\sum_{k \in \mathbb{Z}} a_k V^k$ where the a_k are multiplication operators

Operator Theory, Pseudo-Differential Equations, and Mathematical Physics Yuri I. Karlovich, Luigi Rodino, Bernd Silbermann, Ilya M. Spitkovsky, 2012-10-30 This volume is a collection of papers devoted to the 70th birthday of Professor Vladimir Rabinovich The opening article by Stefan Samko includes a short biography of Vladimir Rabinovich along with some personal recollections and bibliography of his work It is followed by twenty research and survey papers in various branches of analysis pseudodifferential operators and partial differential equations Toeplitz Hankel and convolution type operators variable Lebesgue spaces etc close to Professor Rabinovich's research interests Many of them are written by participants of the International workshop Analysis Operator Theory and Mathematical Physics Ixtapa Mexico January 23-27 2012 having a long history of scientific collaboration with Vladimir Rabinovich and are partially based on the talks presented there The volume will be of great interest to researchers and graduate students in differential equations operator theory functional and harmonic analysis and mathematical physics

Modern Operator Theory and Applications Yakob M. Erusalimskii, Israel Gohberg, Sergei M. Grudsky, Vladimir Rabinovich, Nikolai Vasilevski, 2007-03-06 This volume is dedicated to the eminent Russian mathematician I B Simonenko on the occasion of his 70th birthday It presents recent results in Fredholm theory for singular integral and convolution operators estimates for singular integral operators on Carleson curves acting in L_p spaces with variable exponents the finite sections method for band dominated and Toeplitz operators Szegő type theorems the averaging method for nonlinear equations among others
