Combination Treatment In Autoimmune Diseases:

Combination Treatment in Autoimmune Diseases W.B. Harrison, B.A.C. Dijkmans, 2002-02-26 This book constitutes the refereed proceedings of the 7th International Conference on Software Reuse ICSR 7 held in Austin Texas USA in April 2002. The 22 revised full papers presented together with summaries or abstracts of keynotes, workshops and tutorials were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on implementation, product lines, managerial and economic issues, generators, reuse of non-code artifacts and design issues. The book contributes to bridging the gap between industrial practice and academic research and development in the area.

Combination Treatment in Autoimmune Diseases W.B. Harrison, B.A.C. Dijkmans, 2013-03-14 W. B. Harrison, B. A. C. Dijkmans. During the last decade, intervention has been instituted for all kinds of disease even in a pre-morbid state as early as possible to control the activity of the disease to avoid further damage and to maintain quality of life. Apart from the principle "Treat now, not later," emphasis is laid on aggressive initial therapy. These adages have influenced in recent times all fields of medicine from oncology to infectious diseases and also the topic of the present edition, the autoimmune diseases. As an example of the latter, rheumatoid arthritis (RA) demonstrates how the attitude of physicians has been changed. From an expectant point of view in the eighties, *primum nil nocere*, the attitude has been changed as we approached and entered the new millennium to initial aggressive therapy, especially in patients with a poor prognosis. Despite the advance of instituting monotherapy with a single, optimised disease-modifying anti-rheumatic drug (DMARD) with methotrexate as prototype agent in RA, adequate disease remission is not often achieved and adverse events may well prevent the use of higher dosages of the single agent in question. Therefore, the next step was to combine two or more DMARDs. The choice of combining DMARDs can be purely practical and based upon the anti-rheumatics most used in daily practice, for instance methotrexate and sulphasalazine. The choice of combining drugs can be influenced by different toxicity patterns to avoid cumulative toxicity.

Stem Cell Research Janet T. Arnes, 2006 Embryonic stem cells have the ability to develop into virtually any cell in the body and may have the potential to treat medical conditions such as diabetes and Parkinson's disease. In August 2001, President Bush announced that for the first time federal funds would be used to support research on human embryonic stem cells, but funding would be limited to existing stem cell lines. The National Institutes of Health (NIH) has established the Human Embryonic Stem Cell Registry, which lists stem cell lines that are eligible for use in federally funded research. Although 78 cell lines are listed, 21 embryonic stem cell lines are currently available. Scientists are concerned about the quality, longevity, and availability of the eligible stem cell lines. For a variety of reasons, many believe research advancement requires new embryonic stem cell lines, and for certain applications, stem cells derived from cloned embryos may offer the best hope for progress in understanding and treating disease. A significant cohort of pro-life advocates support stem cell research; those opposed are concerned that the isolation of stem

cells requires the destruction of embryos Letters from Congress one signed by 206 Members of the House and a second signed by 58 Senators have been sent urging President Bush to expand the current federal policy concerning embryonic stem cell research Some have argued that stem cell research be limited to adult stem cells obtained from tissues such as bone marrow They argue that adult stem cells should be pursued instead of embryonic stem cells because they believe the derivation of stem cells from either embryos or aborted fetuses is ethically unacceptable Other scientists believe adult stem cells should not be the sole target of research because of important scientific and technical limitations Groups make ethical distinctions in the debate on how to proceed with stem cell research based upon embryo protection relief of suffering viability the purpose and timing of embryo creation and destruction donor consent scientific alternatives federal funding and cloning Other countries are moving fast with active research programs This book presents the current confused situation along with a selective bibliography
