Colour Art And Science:

Colour Trevor Lamb, Janine Bourriau, 1995-03-16 A fully illustrated collection of eight essays on colour for the non specialist reader

Colour Trevor Lamb, Janine Bourriau, 1995-03-16 Although we experience colour all the time do we really understand colour Three hundred years ago Isaac Newton showed that white light is composed of all the colours of the spectrum yet does this provide us with insight into our own personal experience of colour sensation To answer such questions on the nature of colour this volume gathers the combined knowledge of physics biology history and art It provides an exciting exploration of colour from the diverse perspectives of experts in eight different fields of study Their essays take us on a journey both through the sciences and the world of fine art and they combine to give a full and rewarding view of colour

Colour? , **Color for Science, Art and Technology** Kurt Nassau, 1997-12-18 The aim of this book is to assemble a series of chapters written by experts in their fields covering the basics of color and then some more In this way readers are supplied with almost anything they want to know about color outside their own area of expertise Thus the color measurement expert as well as the general reader can find here information on the perception causes and uses of color For the artist there are details on the causes measurement perception and reproduction of color Within each chapter authors were requested to indicate directions of future efforts where applicable One might reasonably expect that all would have been learned about color in the more than three hundred years since Newton established the fundamentals of color science This is not true because the measurement of color still has unresolved complexities Chapter 2 many of the fine details of color vision remain unknown Chapter 3 every few decades a new movement in art discovers original ways to use new pigments and dyes continue to be discovered Chapter 5 the philosophical approach to color has not yet crystallized Chapter 7 new pigments and dyes continue to be discovered Chapters 10 and 11 the study of the biological and therapeutic effects of color is still in its infancy Chapter 2 Color continues to develop towards maturity and the editor believes that there is much common ground between the sciences and the arts and that color is a major connecting bridge

Science Makes Art: Colour Hilary Devonshire, 2025-08-28

Colour, Art and Empire Natasha Eaton, 2013-10-28 Colour Art and Empire explores the entanglements of visual culture enchanted technologies waste revolution resistance and otherness The materiality of colour offers a critical and timely force field for approaching afresh debates on colonialism This book analyses the formation of colour and politics as qualitative overflow Colour can be viewed both as central and supplemental to early photography the totem alchemy tantra and mysticism From the eighteenth century Austrian Empress Maria Theresa to Rabindranath Tagore and Gandhi to 1970s Bollywood colour makes us adjust our take on the politics of the human sensorium as defamiliarising and disorienting The four chapters conjecture how European Indian and Papua New Guinean artists writers scientists activists anthropologists or their subjects sought to negotiate the highly problematic stasis of colour in the repainting of modernity Specifically the thesis of this book traces Europeans admiration and emulation of what they termed Indian colour

to its gradual denigration and the emergence of a space of exception This space of exception pitted industrial colours against the colonial desire for a massive workforce whose slave like exploitation ignited riots against the production of pigments most notably indigo Feared or derided the figure of the vernacular dyer constituted a force capable of dismantling the imperial machinations of colour Colour thus wreaks havoc with Western expectations of biological determinism objectivity and eugenics Beyond the cracks of such discursive practice colour becomes a sentient and nomadic retort to be pitted against a perceived colonial hegemony The ideological reinvention of colour as a resource for independence struggles make it fundamental to multivalent genealogies of artistic and political action and their relevance to the present
