Combinatorial Aspects Of Lie Superalgebras:

Combinatorial Aspects of Lie Superalgebras Alexander A. Mikhalev, Andrej A. Zolotykh, 1995-06-09 *Combinatorial Aspects of Lie Superalgebras* emphasizes the algorithmic and computational aspects of the combinatorial techniques of Lie superalgebras. It is written primarily for mathematicians and scientists who do not have a background in the field of infinite dimensional Lie superalgebras but who realize the potential uses of the results. Consequently the discussions provided on the applications of Lie superalgebras theory are clear and comprehensive and throughout the text primary attention is given to algorithms and examples. The examples illustrate theoretical results and the algorithms which can be used for symbolic calculations with Lie superalgebras are based on basic and generally applicable rules and theorems. *Combinatorial Aspects of Lie Superalgebras* contains comprehensive literature citations and provides an excellent reference on the techniques and results of combinatorial theory of Lie superalgebras. Programs that have been developed by the authors for computation are included on a diskette at the back of the book and complete directions for use are provided. *First International Tainan-Moscow Algebra Workshop* Y. Selected Works of A.I. Shirshov Leonid A. Bokut, Victor Latyshev, Ivan Shestakov, Efim Zelmanov, 2009-11-09 Anatolii Illarionovich Shirshov 1921-1981 was an outstanding Russian mathematician whose work essentially concerned the theories of associative Lie Jordan and alternative rings. Many of Shirshov's students and students of his students had a successful research career in mathematics. Anatolii Shirshov was born on the 8th of August of 1921 in the village Kolyvan near Novosibirsk. Before the II World War he started to study mathematics at Tomsk university but then went to the front to fight as a volunteer. In 1946 he continued his study at Voroshilovgrad now Lugansk Pedagogical Institute and at the same time taught mathematics at a secondary school. In 1950 Shirshov was accepted as a graduate student at the Moscow State University under the supervision of A. G. Kurosh. In 1953 he has successfully defended his Candidate of Science thesis analog of a Ph.D. on some problems in the theory of nonassociative rings and algebras and joined the Department of Higher Algebra at the Moscow State University. In 1958 Shirshov was awarded the Doctor of Science degree for the thesis *On some classes of rings that are nearly associative*. In 1960 Shirshov moved to Novosibirsk at the invitations of S. L. Sobolev and A. I. Malcev to become one of the founders of the new mathematical institute of the Academy of Sciences now Sobolev Institute of Mathematics and to help the formation of the new Novosibirsk State University. From 1960 to 1973 he was a deputy director of the Institute and till his last days he led the research in the theory of algebras at the Institute. *Topics in Hyperplane Arrangements* Marcelo Aguiar, Swapneel Mahajan, 2017-11-22 This monograph studies the interplay between various algebraic, geometric and combinatorial aspects of real hyperplane arrangements. It provides a careful, organized and unified treatment of several recent developments in the field and brings forth many new ideas and results. It has two parts, each divided into eight

chapters and five appendices with background material Part I gives a detailed discussion on faces flats chambers cones gallery intervals lunes and other geometric notions associated with arrangements The Tits monoid plays a central role Another important object is the category of lunes which generalizes the classical associative operad Also discussed are the descent and lune identities distance functions on chambers and the combinatorics of the braid arrangement and related examples Part II studies the structure and representation theory of the Tits algebra of an arrangement It gives a detailed analysis of idempotents and Peirce decompositions and connects them to the classical theory of Eulerian idempotents It introduces the space of Lie elements of an arrangement which generalizes the classical Lie operad This space is the last nonzero power of the radical of the Tits algebra It is also the socle of the left ideal of chambers and of the right ideal of Zie elements Zie elements generalize the classical Lie idempotents They include Dynkin elements associated to generic half spaces which generalize the classical Dynkin idempotent Another important object is the lune incidence algebra which marks the beginning of noncommutative Möbius theory These ideas are also brought upon the study of the Solomon descent algebra The monograph is written with clarity and in sufficient detail to make it accessible to graduate students It can also serve as a useful reference to experts

Free Algebras and PI-algebras Vesselin S. Drensky, 2000 The book is devoted to the combinatorial theory of polynomial algebras free associative and free Lie algebras and algebras with polynomial identities It also examines the structure of automorphism groups of free and relatively free algebras It is based on graduate courses and short cycles of lectures presented by the author at several universities and its goal is to involve the reader as soon as possible in the research area to make him or her able to read books and papers on the considered topics It contains both classical and contemporary results and methods A specific feature of the book is that it includes as its inseparable part more than 250 exercises and examples with detailed hints 50 % of the numbered statements some of them treating serious mathematical results The exposition is accessible for graduate and advanced undergraduate students with standard background on linear algebra and some elements of ring theory and group theory The professional mathematician working in the field of algebra and other related topics also will find the book useful for his or her research and teaching

students as well as a rich and up to date reference source for contemporary researchers in the field Representations of Lie Algebras Anthony Henderson,2012-08-16 This bold and refreshing approach to Lie algebras assumes only modest prerequisites linear algebra up to the Jordan canonical form and a basic familiarity with groups and rings yet it reaches a major result in representation theory the highest weight classification of irreducible modules of the general linear Lie algebra The author s exposition is focused on this goal rather than aiming at the widest generality and emphasis is placed on explicit calculations with bases and matrices The book begins with a motivating chapter explaining the context and relevance of Lie algebras and their representations and concludes with a guide to further reading Numerous examples and exercises with full solutions are included Based on the author s own introductory course on Lie algebras this book has been thoroughly road tested by advanced undergraduate and beginning graduate students and it is also suited to individual readers wanting an introduction to this important area of mathematics **Zhurnal vychislitel'noĭ matematiki i matematicheskoi fiziki** ,1996 **Subject Guide to Books in Print** ,1997
