Combinatorial Constructions In Ergodic Theory And Dynamics:

Combinatorial Constructions in Ergodic Theory and Dynamics A. B. Katok, 2003 Ergodic theory studies measure preserving transformations of measure spaces These objects are intrinsically infinite and the notion of an individual point or of an orbit makes no sense Still there are a variety of situations when a measure preserving transformation and its asymptotic behavior can be well described as a limit of certain finite objects periodic processes The first part of this book develops this idea systematically Genericity of approximation in various categories is explored and numerous applications are presented including spectral multiplicity and properties of the maximal spectral type The second part of the book contains a treatment of various constructions of cohomological nature with an emphasis on obtaining interesting asymptotic behavior from approximate pictures at different time scales The book presents a view of ergodic theory not found in other expository sources It is suitable for graduate students familiar with measure theory and basic functional analysis

Combinatorial constructions in ergodic theory and dynamics A. B. Katok, 2003 Geometric and Probabilistic Structures in Dynamics Keith Burns, Dmitry Dolgopyat, Ya. B. Pesin, 2008 This book presents a collection of articles that cover areas of mathematics related to dynamical systems The authors are well known experts who use geometric and probabilistic methods to study interesting problems in the theory of dynamical systems and its applications Some of the articles are surveys while others are original contributions The topics covered include Riemannian geometry models in mathematical physics and mathematical biology symbolic dynamics random and stochastic dynamics This book can be used by graduate students and researchers in dynamical systems and its applications

BOOK JACKET **Hyperbolic Dynamics, Fluctuations and Large Deviations** D. Dolgopyat, Y. Pesin, M. Pollicott, L. Stoyanov, 2015-04-01 This volume contains the proceedings of the semester long special program on Hyperbolic Dynamics Large Deviations and Fluctuations which was held from January June 2013 at the Centre Interfacultaire Bernoulli cole Polytechnique F d rale de Lausanne Switzerland The broad theme of the program was the long term behavior of dynamical systems and their statistical behavior During the last 50 years the statistical properties of dynamical systems of many different types have been the subject of extensive study in statistical mechanics and thermodynamics ergodic and probability theories and some areas of mathematical physics The results of this study have had a profound effect on many different areas in mathematics physics engineering and biology The papers in this volume cover topics in large deviations and thermodynamics formalism and limit theorems for dynamic systems The material presented is primarily directed at researchers and graduate students in the very broad area of dynamical systems and ergodic theory but will also be of interest to researchers in related areas such as statistical physics spectral theory and some aspects of number theory and geometry

Handbook of Dynamical Systems B. Hasselblatt, A. Katok, 2002-08-20 Volumes 1A and 1B These volumes give a comprehensive survey of dynamics written by specialists in the various subfields of dynamical systems The presentation attains coherence through a major introductory survey by the editors that organizes the entire subject and by

ample cross references between individual surveys The volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the field and to mathematicians active in other branches of mathematics who wish to learn about contemporary ideas and results dynamics Assuming only general mathematical knowledge the surveys lead the reader towards the current state of research in dynamics Volume 1B will appear 2005 **A Vision for Dynamics in the 21st Century** Danijela Damjanovic, Boris Hasselblatt, Andrey Gogolev, Yakov Pesin, 2024-02-08 A large international conference celebrated the 50 year career of Anatole Katok and the body of research across smooth dynamics and ergodic theory that he touched In this book many leading experts provide an account of the latest developments at the research frontier and together set an agenda for future work including an explicit problem list This includes elliptic parabolic and hyperbolic smooth dynamics ergodic theory smooth ergodic theory and actions of higher rank groups The chapters are written in a readable style and give a broad view of each topic they blend the most current results with the developments leading up to them and give a perspective on future work This book is ideal for graduate students instructors and researchers across all research areas in dynamical systems and related subjects Mathematics of Complexity and Dynamical Systems Robert A. Meyers, 2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers *Handbook of Dynamical Systems* A. Katok, B. Hasselblatt, 2005-12-17 This second half of Volume 1 of this Handbook follows Volume 1A which was published in 2002 The contents of these two tightly integrated parts taken together come close to a realization of the program formulated in the introductory survey Principal Structures of Volume 1A The present volume contains surveys on subjects in four areas of dynamical systems Hyperbolic dynamics parabolic dynamics ergodic theory and infinite dimensional dynamical systems partial differential equations Written by experts in the field The coverage of ergodic theory in these two parts of Volume 1 is considerably more broad and thorough than that provided in other existing sources The final cluster of chapters discusses partial differential equations from the point of view of dynamical systems **Mathematical Reviews**, 2006

Transactions of the Seventh Prague Conference on Information Theory, Statistical Decision Functions,

Random Processes and of the 1974 European Meeting of Statisticians J. Kozesnik,2012-12-06 The Prague Conferences on Information Theory Statistical Decision Functions and Random Processes have been organized every three years since 1956 During the eighteen years of their existence the Prague Conferences developed from a platform for presenting results obtained by a small group of researchers into a probabilistic congress this being documented by the increasing number of participants as well as of presented papers The importance of the Seventh Prague Conference has been emphasized by the fact that this Conference was held jointly with the eighth European Meeting of Statisticians This joint meeting was held from August 18 to 23 1974 at the Technical University of Prague The Conference was organized by the Institute of Information Theory and Automation of the Czechoslovak Academy of Sciences and was sponsored by the Czechoslovak Academy of Sciences by the Committee for the European Region of the Institute of Mathematical Statistics and by the International Association for Statistics in Physical Sciences More than 300 specialists from 25 countries participated in the Conference In 57 sessions 164 papers including 17 invited papers were read 128 of which are published in the present two volumes of the Transactions of the Conference Volume A includes papers related mainly to probability theory and stochastic processes whereas the papers of Volume B concern mainly statistics and information theory Discrete and Continuous Dynamical Systems ,2005

Combinatorial Constructions in Smooth Ergodic Theory Philipp Kunde,2014

Single Orbit Dynamics Benjamin Weiss,2000 This book presents the expanded notes from ten lectures given by the author at the NSF CBMS conference held at California State University Bakersfield The author describes what he calls single orbit dynamics which is an approach to the analysis of dynamical systems via the study of single orbits rather than the study of a system as a whole He presents single orbit interpretations of several areas of topological dynamics and ergodic theory and some new applications of dynamics to graph theory In the concluding lectures single orbit approaches to generalizations of the Shannon Breiman McMillan theorem and related problems of compression and universal coding are presented Complete proofs and illuminating discussions are included and references for further study are given Some of the material appears here for the first time in print Annales scientifiques de l'École normale supérieure École normale supérieure (France),2005
