Cerebral Cortex Alan Peters,Edward G. Jones,1991 This volume of the series on Cerebral Cortex deals with a variety of topics that need to be considered in our overall understanding of the functions of the cerebral hemispheres Chapters in the first part of this volume deal with normal functions that were not covered in earlier volumes while chapters in the latter part deal with the functioning of the cortex in various altered states The first chapter is by Eberhard Fetz Keisuke Toyama and Wade Smith and it considers the interactions that can be demonstrated to exist between cortical neurons by using the technique of cross correlation The second chapter is by Brent Vogt who examines the connections and functions of layer I of the cerebral cortex a layer that has been largely ignored in the past and he proposes that this layer probably plays an important role in learning and memory acquisition This is followed by a chapter in which Oswald Steward presents a review of what is currently known about synaptic replacement following denervation of cortical neurons and especially those in the hippocampus *Diversity of Interacting Receptors* Leo G. Abood,Abel Lajtha,1995 This volume increases understanding of functional significance of neuronal receptor diversity by presenting the latest work on such subjects as the genetic regulation of receptor subtypes the functional characteristics of neurons with subtypes second messenger and ion channel diversity species and regional differences in receptor subtypes changes occurring with age and pathologic state and changes in receptor structure and gene expression associated with prolonged exposure to agonists and antagonists **The American Journal of Psychiatry** ,1926 **The Functional Role of Spatial Selective Attention in Spatial Working Memory** Amishi Parag Jha,1998
