definitive guide to the field of developmental science Volume 2 Cognitive Processes describes cognitive development as a  
relational phenomenon that can be studied only as part of a larger whole of the person and context relational system that  
sustains it In this volume specific domains of cognitive development are contextualized with respect to biological processes  
and sociocultural contexts Furthermore key themes and issues e.g. the importance of symbolic systems and social  
understanding are threaded across multiple chapters although every chapter is focused on a different domain within  
cognitive development Thus both within and across chapters the complexity and interconnectivity of cognitive development

are well illuminated Learn about the inextricable intertwining of perceptual development motor development emotional development and brain development Understand the complexity of cognitive development without misleading simplification reducing cognitive development to its biological substrates or viewing it as a passive socialization process Discover how each portion of the developmental process contributes to subsequent cognitive development Examine the multiple processes such as categorizing reasoning thinking decision making and judgment that comprise cognition The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period There is a paradigm shift that involves increasingly greater understanding of how to describe explain and optimize the course of human life for diverse individuals living within diverse contexts This Handbook is the definitive reference for educators policy makers researchers students and practitioners in human development psychology sociology anthropology and neuroscience
