Disaster And Development:

Disaster and Development Naim Kapucu, Kuotsai Tom Liou, 2014-04-11 This book offers a systematic empirical examination of the concepts of disasters and sustainable economic development applied to many cases around the world. It presents comprehensive coverage of the complex and dynamic relationship between disaster and development, making a vital contribution to the literature on disaster management, disaster resilience, and sustainable development. The book collects twenty-three chapters examining theoretical issues and investigating practical cases on policy governance and lessons learned in dealing with different types of disasters, e.g., earthquakes, floods, and hurricanes in twenty countries and communities around the world. *Disaster and Development: an Occupational Perspective* Nancy Rushford, Kerry Thomas, 2015-03-05 A ground-breaking book that crosses cultures and contexts to provide a foundation for critical reflection on the role of occupation in disaster and development. An occupational perspective is illuminated by drawing upon the experiences of survivors, practitioners, personnel from local and international organisations, researchers, and academics with implications for policy practice and education. Supports the development, use, and practice of occupational therapy in disaster preparedness and response contexts. Presents a rich array of new material and learning which is sought after by occupational therapy and occupational science professions. Case study experiences covering epidemics, refugee crises, industrial emergencies, conflict, terrorism, and natural disasters. Concludes with a description and analysis of a proposed occupational framework for disaster preparedness and response. Contributed by a truly global team of authors from Australia, the US, India, Japan, Sri Lanka, the UK, Hong Kong, Indonesia. Edited by a team who are widely recognised and experienced in development and disaster contexts. *Disasters and Development* Frederick C. Cuny, 1983. Sponsored by Oxfam America. *Natural Disasters and Development in a Globalizing World* Mark Pelling, 2003. Authoritative and comprehensive, this book makes clear that there are links between global scale processes and local experiences of disaster, but underlies the difficulty of attributing blame for individual disasters on specific global pressures. *Sustainable Development and Disaster Risk Reduction* Juha I. Uitto, Rajib Shaw, 2015-11-05 This book focuses on exploring the linkages between natural disasters and sustainable development at the global, regional, and national levels. Disasters and development are closely related, yet the disciplinary silos prevail, and there is little communication and cooperation between the disaster management environment and development communities. One catastrophic event, such as an earthquake, tsunami, or cyclone, can destroy infrastructure, people's lives, and livelihoods, and set back development. Similarly, slow-onset disasters often associated with global climate change pose threats to development, livelihoods, food security, and long-term sustainable development. This book is uniquely aimed at bridging the gaps between the environmental development and disaster management communities. It traces the evolution of concepts and practice and highlights the linkages between natural disasters and sustainable development in key sectors including food security, health, and water. The book includes case studies from the field highlighting the complex issues that challenge

sustainable development and disaster risk management in practice It draws policy conclusions for the global community based on state of the art knowledge from research and practice The primary target groups for the book are researchers including graduate students in the fields of environment and sustainable development geography disaster risk reduction and climate change studies The second target group comprises practitioners and policymakers working in national and international organizations the private sector and civil society

Mapping Vulnerability Greg Bankoff, Georg Frerks, Dorothea Hilhorst, 2013-06-17 Raging floods massive storms and cataclysmic earthquakes every year up to 340 million people are affected by these and other disasters which cause loss of life and damage to personal property agriculture and infrastructure So what can be done The key to understanding the causes of disasters and mitigating their impacts is the concept of vulnerability Mapping Vulnerability analyses vulnerability as a concept central to the way we understand disasters and their magnitude and impact Written and edited by a distinguished group of disaster scholars and practitioners this book is a counterbalance to those technocratic approaches that limit themselves to simply looking at disasters as natural phenomena Through the notion of vulnerability the authors stress the importance of social processes and human environmental interactions as causal agents in the making of disasters They critically examine what renders communities unsafe a condition they argue that depends primarily on the relative position of advantage or disadvantage that a particular group occupies within a society's social order The book also looks at vulnerability in terms of its relationship to development and its impact on policy and people's lives through consideration of selected case studies drawn from Africa Asia and Latin America Mapping Vulnerability is essential reading for academics students policymakers and practitioners in disaster studies geography development studies economics environmental studies and sociology

Constructing Risk Stephen O. Bender, 2021-08-13 Reviewing current policies and practices the book assesses the financial economic and physical risk of building in hazardous areas and looks at how societies approach economic development while trying to create a more resilient built environment in spite of the dangers It examines the vulnerability of economic and social infrastructure to natural hazard events looks at policies which imperil infrastructure and proposes new development approaches to be undertaken by sovereign states international development banks NGOs and bilateral aid agencies

Gender, Development and Disasters Sarah Bradshaw, 2013-04-01 Disaster research owes a lot to development studies and yet the debt is often not acknowledged In this scholarly but accessible book by Sarah Bradshaw we see a very effective linking of gender disaster and development that will be of value to academics and practitioners working in and across all these domains Maureen Fordham University of Northumbria UK Bringing gender into the foreground in both development and disaster discourse the author challenges received wisdom and offers cautionary notes about reinforcing inequalities through feminized disaster interventions The book is an outstanding platform for fundamental change in how we think about and act toward gender in disaster contexts leaving readers cautiously optimistic This is one for the top shelf a book we have been waiting for and must put to use Elaine Enarson founder Gender and Disaster Resilience Alliance Once in a while a book is published which offers an empirically and theoretically informed analysis of an under studied topic which helps to carve out a new field of enquiry Such is the case with Dr Sarah Bradshaw s breathtakingly detailed richly first hand informed and incisive account of the frequently paradoxical co option of women into the analysis and practice of disaster in developing economies Bradshaw s eminently comprehensive well substantiated perceptive and sensitive treatment of the A to Z of gender and disaster in developing country contexts constitutes a 21st century volume which will be a definitive benchmark for scholars policymakers practitioners and feminist activists at a world scale Sylvia Chant London School of Economics UK The need to disaster proof development is increasingly recognised by development agencies as is the need to engender both development and disaster response This unique book explores what these processes mean for development and disasters in practice Sarah Bradshaw critically examines key notions such as gender vulnerability risk and humanitarianism underpinning development and disaster discourse Case studies are used to demonstrate how disasters are experienced individually and collectively as gendered events Through consideration of processes to engender development it problematizes women s inclusion in disaster response and reconstruction The study highlights that while women are now central to both disaster response and development tackling gender inequality is not By critically reflecting on gendered disaster response and the gendered impact of disasters on processes of development it exposes some important lessons for future policy This timely book examines international development and disaster policy which will prove invaluable to gender and disaster academics students and practitioners

Environmental Change and Sustainable Social Development Sven Hessel, 2016-05-06 How does climate change affect social work and social development What actions are needed to integrate the three pillars of economic development environmental development and social protection With global warming and the increase in natural disasters due to the emission of greenhouse gases an alternative approach to the natural environment is

vital The main focus of this volume is to emphasize the person in environment concept and to find measures for its implementation For social work the environment has traditionally been viewed as a world of human relationships as opposed to the interaction between man and environment This informative and incisively written edited collection brings together experts from around the world to analyze the person in environment concept and to find measures for its implementation Through the presentation of theoretical and practical platforms for environmental social work or green social work we hope to bring about a new paradigmatic shift in our attitude to the concept of person in environment

Development and Disaster Management Amita Singh, Milap Punia, Nivedita P. Haran, 2019-07-13 This book highlights the relationship between disasters and development through a socio cultural study of human geography and governance institutions It studies the cause context and consequences of disasters in one of the most fragile Himalayan regions in India The book establishes the fact that disaster management is built within the framework of good governance without which it has no meaning For lack of effective and responsive governance development has lagged behind and even though the frequency of disasters has been increasing little is being done to redesign developmental frameworks to prevent ensuing losses Besides the near absence of governmental support during recurrent disasters communities have cumulatively become reservoirs of innovations to cope up with disasters The resilience plans need not follow implanted models but may be cost effective only if they apply a bottom up approach Just as the region is culturally diverse so are the challenges encountered by local communities in terms of generating resilience to every disaster Despite more than a decade of the Disaster Management Act DMA of 2005 most of the states in this northeastern fringe of India continue to wait for its implementation beyond mere structures and offices The book suggests that urgent action is required in accordance with the DMA 2005 towards inter agency coordination proactive participation of local governance mobilization of Community based Organizations CBOs and curriculum based training in every academic and technical institution Governments of these northeastern states of India should establish accountability of State Disaster Management Authorities and inspire them to participate proactively with communities for an effective
