Dinosaurs Discovery Program:

Wyoming's Dinosaur Discoveries The Big Horn Basin Foundation, 2015-11-02 Wyoming is home to some of the world's most famous dinosaurs. As early as 1872 dinosaurs were excavated, placed on railcars and shipped east. For the past 140 years paleontologists have scoured Wyoming to excavate tens of thousands of dinosaur bones now displayed internationally. It was not until 1961 that a dinosaur from Wyoming was mounted and placed on display at the University of Wyoming's Geological Museum in Laramie.

[A Traveler's Guide to Tracking Dinosaurs in the Western United States](#) William D. Panczner, 1995

The Rocky Mountains and surrounding areas contain some of the biggest and best preserved dinosaur remains on earth. This book describes the types that have been found where they were located and the museums that display them.

Romancing the Birds and Dinosaurs Alan Feduccia, 2020-10-15

Birds and dinosaurs have dominated human interest for decades. In this well-supported revolutionary view of the field, critical questions are explored with credible evidence and biological thought. Are birds derived directly from advanced dinosaurs or are they closely related dinosaur cousins? Did flight originate via the natural gravity-assisted trees-down model or from the improbable gravity-resisted ground-up model? Were the earliest birds ground predators or trunk-climbing gliders? Were dinosaurs hot-blooded with insulating protofeathers or highly active cold-blooded reptiles? These are among the questions addressed in this path-breaking book. Current consensus suggests that early birds were earth-bound and flight began on the ground. Reversing that logic, since birds are hot-blooded by inference, so too were dinosaurs, and extraordinarily complex feathers, flight brain, and inner ear evolved before flight in dinosaurs. The iconic early bird *Archaeopteryx*, despite innumerable flight and arboreal features, is now displayed as an earth-bound predator that could not fly. In reality, we have yet to provide satisfactory explanations for much of the biological origin and early evolution of birds. Among the questions addressed is whether truly feathered dinosaurs are in reality lost or hidden birds. The architectural complexity of feathers leads the author to the conclusion that if an animal has evolved extraordinarily complex aerodynamically designed feathers, an avian flight hand, flight membranes, and a flight brain, it's a bird. Birds and dinosaurs captivate and enchant the human imagination. These intriguing animals have dominated the field of paleontology and evolution for the past half-century, engendering heated debate on avian ancestry, the origin of flight and feathers, and the biology of their fossils. Are birds living dinosaurs? In this series of entertainingly contentious and captivating essays, evolutionary biologist Alan Feduccia writes with verve and humor to expose major problems in the field and advocate liberation from the shackles of consensus thinking about birds and dinosaurs. He maintains that the euphoria of paleontologists claiming to have solved the major problems of bird evolution is premature, largely generated by the adoption of a rigid, cult-like methodology heavily blended with ideology and excluding many biological and geological principles. He adroitly exposes and elucidates major mistakes in the field and their aftermath. *Romancing the Birds and Dinosaurs* is a lucid revelation of clarity and synthesis, a fascinating unveiling of the underlying science that has produced the good but also often
