BUSINESS ECONOMICS CASE STUDY:

1. Inflation situation in the current Indian Economy:

Inflation refers to the rise in the prices of most goods and services of daily or common use, such as food, clothing, housing, recreation, transport, consumer staples, etc. Inflation measures the average price change in a basket of commodities and services over time. Today about 130 crore people are in the subcontinent are coping with a common problem of high inflation. Official data tells us that wholesale price index (WPI)-linked inflation went double-digit at 10.5% year-on-year in April 2021 (from 7.4 per cent in March), for the first time since 2010. The CPI inflation, moderated to 4.3 per cent (from 5.5 per cent in March) – led by a high base of the previous year (it had spiked to 7.2 per cent in April 2020). But last year's base may not reflect accurate trends, as data collection was disrupted in April and May 2020. A month-on-month analysis may put the picture in better perspective. The sharp rise in commodity prices across the world is a major reason behind the inflation spike in India. Brent crude prices crossed \$65 per barrel in May 2021, more than double of what it was a year ago. Price of vegetable oils, a major import item, shot up 57% to reach a decadal high in April 2021. Metals prices are near the highest in 10 years and international freight costs are escalating. "The trend of WPI rising for inputs is showing up in manufacturing costs including in chemicals, paper, and textile sectors," said Dharmakirti Joshi, Chief Economist at Crisil. As per Crisil estimates, CPI inflation was likely to moderate to 5% this fiscal from 6.2% last fiscal. This was based on lower food inflation benefitting from the high base of last year and assuming a normal monsoon. However, upside inflation risks are growing. On top of rising input prices, supply disruptions brought on by the second Covid wave in rural India are adding to inflationary pressure. These are the major reasons behind such change in projections.
