Mathematical Modelling with Case Studies B. Barnes, G..R. Fulford, 2011-03-23 Focusing on growth and decay processes interacting populations and heating cooling problems Mathematical Modelling with Case Studies A Differential Equations Approach using Maple and MATLAB Second Edition presents mathematical techniques applicable to models involving differential equations that describe rates of change Although the authors *Mathematical Modelling* J. Caldwell, Douglas K.S. Ng, 2004-03-31 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science engineering business and management Recent developments in computer technology and related software have provided the necessary tools of increasing power and sophistication which have significant implications for the use and role of mathematical modelling in the above disciplines In the past traditional methods have relied heavily on expensive experimentation and the building of scaled models but now a more flexible and cost effective approach is available through greater use of mathematical modelling and computer simulation In particular developments in computer algebra symbolic manipulation packages and user friendly software packages for large scale problems all have important implications in both the teaching of mathematical modelling and more importantly its use in the solution of real world problems Many textbooks have been published which cover the art and techniques of modelling as well as specific mathematical modelling techniques in specialist areas within science and business In most of these books the mathematical material tends to be rather tailor made to fit in with a one or two semester course for teaching students at the undergraduate or postgraduate level usually the former This textbook is quite different in that it is intended to build on and enhance students modelling skills using a combination of case studies and projects *Mathematical Modeling* Ellis Cumberbatch, Alistair Fitt, 2001-10-01 Industrial Mathematics is growing enormously in popularity around the world This book deals with real industrial problems from real industries Presented as a series of case studies by some of the world s most active and successful industrial mathematicians this volume shows clearly how the process of mathematical collaboration with industry can not only work successfully for the industrial partner but also lead to interesting and important mathematics The book begins with a brief introduction where the equations that most of the studies are based

upon are summarized Thirteen different problems are then considered ranging from the cooking of cereal to the analysis of epidemic waves in animal populations Throughout the work the emphasis is on telling industry what they really want to know This book is suitable for all final year undergraduates master s students and Ph D students who are working on practical mathematical modeling *Mathematical Modelling* Ian Huntley,D. J. G. James,1990 An important component of mathematical education at all levels the use of mathematics to model real world situation In this book the emphasis is on developing models which provide a means to analysis and answer questions posed in practical settings It provides a pendium of case studies of mathematical models of varying degrees of sophistication and practicality Teachers and students of mathematical modelling will find it a rich source of examples ranging from insulating houses to basketball and from modelling epidemics to studying the generation of windmill power **Exploring Mathematical Modeling in Biology Through Case Studies and Experimental Activities** Rebecca Sanft,Anne Walter,2020-04-01 Exploring Mathematical Modeling in Biology through Case Studies and Experimental Activities provides supporting materials for courses taken by students majoring in mathematics computer science or in the life sciences The book s cases and lab exercises focus on hypothesis testing and model development in the context of real data The supporting mathematical coding and biological background permit readers to explore a problem understand assumptions and the meaning of their results The experiential components provide hands on learning both in the lab and on the computer As a beginning text in modeling readers will learn to value the approach and apply competencies in other settings Included case studies focus on building a model to solve a particular biological problem from concept and translation into a mathematical form to validating the parameters testing the quality of the model and finally interpreting the outcome in biological terms The book also shows how particular mathematical approaches are adapted to a variety of problems at multiple biological scales Finally the labs bring the biological problems and the practical issues of collecting data to actually test the model and or adapting the mathematics to the data that can be collected **Mathematical Modelling with Case Studies** Belinda Barnes,2009 **Case Studies in Mathematical Modelling** W. E. Boyce,1986-05-01 **Mathematical Modelling** Reinhard Illner,2005 *Mathematical Modelling in Real Life Problems* Ewald Lindner,Alessandra Micheletti,Cláudia Nunes,2020-12-05 This book is intended to be a useful contribution for the modern teaching of applied mathematics educating Industrial Mathematicians that will meet the growing demand for such experts It covers many applications where mathematics play a fundamental role from biology telecommunications medicine physics finance and industry It is presented in such a way that can be useful in Modelation Simulation and Optimization courses targeting master and PhD students Its content is based on many editions from the successful series of Modelling Weeks organized by the European Consortium of Mathematics in Industry ECMI Each chapter addresses a particular problem and is written in a didactic way providing the description of the problem the particular way of approaching it and the proposed solution along with the results obtained **Case Studies in Mathematical Modelling** R.

Bradley, R. D. Gibson, M. Cross, 1981 This book begins with an introduction to modelling illustrated by reference to recent work on gas flow and heat transfer in large blast furnaces Particular emphasis is placed on the problems of modelling large complex situations in which scientists and engineers of many different disciplines have roles to play and on the problems of communications between the modeller and experts in these other disciplines Six case studies are then reported A typical student progress report is presented for each project together with a critical assessment of the approach adopted Finally a model solution is given

Mathematical Modelling J. Caldwell, Y.M. Ram, 2013-06-29 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science and engineering There has been a constant movement in the emphasis from developing proficiency in purely mathematical techniques to an approach which caters for industrial and scientific applications in emerging new technologies In this textbook we have attempted to present the important fundamental concepts of mathematical modelling and to demonstrate their use in solving certain scientific and engineering problems This text which serves as a general introduction to the area of mathematical modelling is aimed at advanced undergraduate students in mathematics or closely related disciplines e.g. students who have some prerequisite knowledge such as one variable calculus linear algebra and ordinary differential equations Some prior knowledge of computer programming would be useful but is not considered essential The text also contains some more challenging material which could prove attractive to graduate students in engineering or science who are involved in mathematical modelling In preparing the text we have tried to use our experience of teaching mathematical modelling to undergraduate students in a wide range of areas including mathematics and computer science and disciplines in engineering and science An important aspect of the text is the use made of scientific computer software packages such as MAPLE for symbolic algebraic manipulations and MATLAB for numerical simulation
