Australia And The Global Trade System:

Australia and the Global Trade System Ann Capling,2001-04-02 Australia and the Global Trade System provides a comprehensive account of Australia's role in developing and maintaining the multilateral trade system from its origins in 1947 to the present day. Australia was one of the 23 original signatories to the General Agreement on Tariffs and Trade (GATT) and its participation was vital to the success of international efforts to reconstruct a multilateral trade system after the disastrous experiences of the 1930s. Since then, Australia has wielded far more influence in the GATT and its successor, the World Trade Organization (WTO). This 2001 book, based on archival sources and oral interviews, makes a significant contribution to our understanding of Australia's trade policies, its commercial diplomacy, and its role and position in the global political economy. It provides a perspective on debates about the capacity of small nations to be agents as well as subjects of history.

Re-Orienting Australia-China Relations Nicholas Thomas,2017-03-02 Drawing on contributors from academic and policy communities, this volume explores the major aspects of Australia-China relations. The frequently overlooked connection between Australia and Taiwan is also considered to allow readers to reach a full appreciation of the restraints engendered by the relationship with China, as well as its many benefits. Moving beyond the traditional state-centric analysis, the work incorporates new material on sub-state relations, as well as examining the impact of global economic and social forces on the Australia-China friendship. In addition to providing a contemporary understanding of the bilateral ties, this work also provides a benchmark against which Australia's other relations with the countries of East Asia can be measured.

Finance and Production Complex Systems Ze Wang, Shupe Huang, Brian Lucey,2025-12-08 Finance complex systems involves the nonlinear, networked behaviors of financial markets, institutions, and heterogeneous stakeholders, where systemic risks and feedback loops drive phenomena such as market crashes or contagion effects. Meanwhile, production complex systems are composed by the input and output interactions among enterprises or sectors, which facilitate the production fluctuations and amplify the economic impacts. Moreover, under the financial accelerator view, the financial system and production system closely interact with each other and could speed up and exacerbate the systemic risk and economic reduction through mutual contagion. In recent years, the global economy has faced an increasing frequency of extreme events, including financial crises, supply chain disruptions, pandemics, geopolitical conflicts, and climate-related disasters. These crises often occur simultaneously and trigger cascading effects across sectors beyond physical boundaries, which reveals the fragile nature of the finance and production systems and their interdependence between financial stability and production resilience. Thereby, it is important to understand interconnected systems and explore the underlying mechanisms. Recent advancements in network theory, statistical physics, agent-based models, and artificial intelligence algorithms display great potential to uncover these systems' complex dynamics, offering interdisciplinary solutions and tools to identify, predict, and mitigate cascading effects under uncertainty. This Research Topic aims to address these challenges by

fostering interdisciplinary research that explores the resilience adaptability and systemic risks inherent in finance and production systems By integrating approaches from physics economics and computational science this initiative seeks to develop innovative models and tools for navigating the uncertainties of a highly interconnected global economy The goal is to enhance understanding improve risk management and support robust decision making in the face of growing complexity and unpredictability Topics of interest include but are not limited to 1 Interaction between Financial and Production Systems 2 Systemic Risks and Contagion in Networked Financial Markets 3 Risk Management and Decision Making from Complex Adaptive Systems Perspective 4 Amplification of Economic Impacts and Production System Volatility 5 Identification and Early Warning of Systemic Risks under Uncertainty 6 Cross Disciplinary Innovation Financial and Production System Integration 7 Linkages between Climate Change and Financial Crises 8 Agent Based Modeling of Systemic Risk Propagation and Economic Slowdown 9 Risk Transmission and Financial Vulnerabilities in Global Supply Chains 10 Building Resilience in Crisis Contexts Policy Responses for Financial and Production Systems We welcome theoretical empirical and computational studies from diverse disciplines including physics economics and systems science Submissions should emphasize originality and cross disciplinary relevance
