Australia's Most Dangerous Animals Karen McGhee, Kathy Riley, 2020-11-30 Collecting together the animals from beloved Australian Geographic series Australia's Most Dangerous this hard cover book profiles Australia's deadliest animals We've got the world's most venomous snake the deadliest jellyfish spider and octopus the biggest crocodile and all of the shark species known to have attacked and killed people The best way to coexist with these animals is to know all about them learn about more than 560 incredible species in this book [The Animals of Australia](#) Arthur Henry Shakespeare Lucas, William Henry Dudley Le Souëf, 1909 *A Manual of Land and Fresh Water Vertebrate Animals of the United States (exclusive of Birds)* Henry Sherring Pratt, 1923 The naturalist frequently finds that to learn to identify species is a most difficult task and yet nothing is more important to his work He finds that species are

not separated merely on shape and colour but on structural peculiarities which frequently are connected with particular habits This is especially the case in vertebrate animals which in Great Britain with its very limited number of forms may be identified in a haphazard manner by elimination This is impossible in a country where different climatic areas interdigitate and where there are many species as the United States which for the purpose of the naturalist is a continent Here Prof H S Pratt fills the bill by his *Vertebrate Animals of the United States* which however omits birds A short account of each group is given the anatomical features dividing it up into sub groups and families being usually illustrated Where necessary special features for families are described and then follow keys to the genera descriptions of the same and keys to their species The whole closes with a good bibliography and a glossary of technical terms The short descriptions of each species with mention of their geographical distributions and habitats are excellent and the tabulation of the sub species most useful We learn that there are about 600 species of freshwater fishes 70 of newts and 61 of frogs and toads we are given a key by which their tadpoles and eggs can be identified 300 reptiles and a wide series of mammals belonging to 9 orders We characterise this publication as a book for ready reference such as should be on the shelves of all American naturalists
