Automata And Languages Theory And Applications:

   Automata and Languages Alexander Meduna,2012-12-06 Automata and Languages presents a step by step development of the theory of automata languages and computation Intended to be used as the basis of an introductory course to this theory at both junior and senior levels the text is organized in such a way as to allow the design of various courses based on selected material Areas featured in the book include basic models of computation formal languages and their properties computability decidability and complexity a discussion of the modern trends in the theory of automata and formal languages design of programming languages including the development of a new programming language compiler design including the construction of a complete compiler Alexander Meduna uses clear definitions easy to follow proofs and helpful examples to make formerly obscure concepts easy to understand He also includes challenging exercises and programming projects to enhance the reader s comprehension and to put the theory firmly into a real world context he presents lots of realistic illustrations and applications in practical computer science   *Fuzzy Automata and Languages* John N. Mordeson,Davender S. Malik,2002-03-19 Fuzzy Automata Theory offers the first in depth treatment of the theory and mathematics of fuzzy automata and fuzzy languages It effectively compares and contrasts the different approaches used in fuzzy mathematics and automata and includes complete proofs of the theoretical results presented More than 60 figures and 125 examples illustrate the results and exercises in each chapter serve not only to test understanding but also to present material not covered in detail within the text Although the book is theoretical in nature the authors also discuss applications in a variety of fields including databases medicine learning systems and pattern recognition   *Automata And Languages: Theory And Applications* Meduna,2005-01-01   *Language and Automata Theory and Applications* Adrian-Horia Dediu,Carlos Martín-Vide,Shunsuke Inenaga,2011-05-27 This book constitutes the refereed proceedings of the 5th International Conference on Language and Automata Theory and Applications LATA 2011 held in Tarragona Spain in May 2011 The 36 revised full papers presented together with four invited articles were carefully selected from 91 submissions Among the topics covered are algebraic language theory automata and logic systems analysis systems verifications computational complexity decidability unification graph transformations language based cryptography and applications in data mining computational learning and pattern recognition   *Language and Automata Theory and Applications* Carlos Martín-Vide,Alexander Okhotin,Dana Shapira,2019-03-12 This book constitutes the refereed proceedings of the 13th International Conference on Language and Automata Theory and Applications LATA 2019 held in St Petersburg Russia in March 2019 The 31 revised full papers presented together with 5 invited talks were carefully reviewed and selected from 98 submissions The papers cover the following topics Automata Complexity Grammars Languages Graphs trees and rewriting and Words and codes   **Language and Automata Theory and Applications** Carlos Martin-Vide,Friedrich Otto,Henning Fernau,2008-09-25 This book constitutes the refereed proceedings of the Second International Conference on Language and

Automata Theory and Applications LATA 2008 held in Tarragona Spain in March 2008 The 40 revised full papers presented were carefully reviewed and selected from 134 submissions The papers deal with the various issues related to automata theory and formal languages   *Automata Theory and its Applications* Bakhadyr Khoussainov,Anil Nerode,2001-06-08 The theory of finite automata on finite stings infinite strings and trees has had a dis tinguished history First automata were introduced to represent idealized switching circuits augmented by unit delays This was the period of Shannon McCullouch and Pitts and Howard Aiken ending about 1950 Then in the 1950s there was the work of Kleene on representable events of Myhill and Nerode on finite coset congruence relations on strings of Rabin and Scott on power set automata In the 1960s there was the work of Btichi on automata on infinite strings and the second order theory of one successor then Rabin s 1968 result on automata on infinite trees and the second order theory of two successors The latter was a mystery until the introduction of forgetful determinacy games by Gurevich and Harrington in 1982 Each of these developments has successful and prospective applications in computer science They should all be part of every computer scientist s toolbox Suppose that we take a computer scientist s point of view One can think of finite automata as the mathematical representation of programs that run us ing fixed finite resources Then Btichi s SIS can be thought of as a theory of programs which run forever like operating systems or banking systems and are deterministic Finally Rabin s S2S is a theory of programs which run forever and are nondeterministic Indeed many questions of verification can be decided in the decidable theories of these automata   **Language and Automata Theory and Applications** Carlos Martin-Vide,Adrian Horia Dediu,Henning Fernau,2010-05-10 This book constitutes the proceedings of the 4th International Conference LATA 2010 held in May 2010 in Trier Germany The 47 full papers presented were carefully selected from 115 submissions and focus on topics such as algebraic language theory algorithmic learning bioinformatics computational biology pattern recognition program verification term rewriting and tree machines   Language and Automata Theory and Applications Alberto Leporati,Carlos Martín-Vide,Dana Shapira,Claudio Zandron,2021-02-22 This book constitutes the proceedings of the 15th International Conference on Language and Automata Theory and Applications LATA 2021 held in Milan Italy in March 2021 The 26 full papers presented in this volume were carefully reviewed and selected from 52 submissions They were organized in topical sections named algebraic structures automata complexity learning logics and languages trees and graphs and words and strings   **Language and Automata Theory and Applications** Alberto Leporati,Carlos Martín-Vide,Dana Shapira,Claudio Zandron,2020-02-25 This book constitutes the proceedings of the 14th International Conference on Language and Automata Theory and Applications LATA 2020 which was planned to be held in Milan Italy in March 2020 Due to the corona pandemic the actual conference was postponed and will be held together with LATA 2021 The 26 full papers presented in this volume were carefully reviewed and selected from 59 submissions They were organized in topical sections named algebraic structures automata complexity grammars languages trees and graphs and words and codes The book also contains 6 invited
