Automated Development Of Fundamental Mathematical Theories:

Automated Development of Fundamental Mathematical Theories Art Quaife, 1992-11-30 The author provides an introduction to automated reasoning and in particular to resolution theorem proving using the prover OTTER He presents a new clausal version of von Neumann Bernays G del set theory and lists over 400 theorems proved semiautomatically in elementary set theory He presents a semiautomated proof that the composition of homomorphisms is a homomorphism thus solving a challenge problem The author next develops Peano s arithmetic and gives more than 1200 definitions and theorems in elementary number theory He gives part of the proof of the fundamental theorem of arithmetic unique factorization and gives and OTTER generated proof of Euler s generalization of Fermat s theorem Next he develops Tarski s geometry within OTTER He obtains proofs of most of the challenge problems appearing in the literature and offers further challenges He then formalizes the modal logic calculus K4 in order to obtain very high level automated proofs of L b s theorem and of G del s two incompleteness theorems Finally he offers thirty one unsolved problems in elementary number theory as challenge problems
