Musen,1989   *Knowledge Acquisition, Modeling and Management* Dieter Fensel,Rudi Studer,1999-06-22 This book constitutes the refereed proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May 1999 The volume presents 16 revised full papers and 15 revised short papers were carefully reviewed and selected form a high number of submissions Also included are two invited papers The papers address issues of knowledge acquisition i e the process of extracting creating structuring knowledge etc of knowledge level modeling for knowledge based systems and of applying and redefining this work in a knowledge management and knowledge engineering context   Knowledge Acquisition, Modeling and Management Rudi Studer,2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Kno edge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of s missions re ect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledgefromahumanexpert Variousmethodsandtoolshavebeendeveloped to improve this process These approaches signi cantly reduced the cost of veloping knowledge based systems However these systems often only partially ful lled the taskthey weredevelopedfor andmaintenanceremainedanunsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transf ring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not nec sarily re ect the already available human expertise Instead it should provide a knowledgelevelcharacterizationof the knowledgethat is requiredby the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and onto gies The former describe the reasoning process of the knowledge based system i e the algorithms it uses and the latter describe the knowledge structures it uses i e the data structures Both abstract from speci c application and domain speci c circumstances to enable knowledge reuse   Current Trends in Knowledge Acquisition Bob Wielinga,1990 Knowledge acquisition has become a major area of artificial intelligence and cognitive science research The papers in this book show that the area of knowledge acquisition for knowledge based systems is still a diverse field in which a large number of research topics are being addressed However several main themes run through the papers First the issues of integrating knowledge from different sources and K A tools is a salient topic in many papers A second major topic in the papers is that of knowledge modelling Research in knowledge based systems emphasises the use of generic models of reasoning and its underlying knowledge An important trend in the area of knowledge modelling aims at the formalisation of knowledge models

Where the field of knowledge acquisition was without tools and techniques years ago now there is a rapidly growing body of techniques and tools Apart from the integrated workbenches already mentioned above several papers in this book present new tools Although knowledge acquisition and machine learning have been considered as separate subfields of AI there is a tendency for the two fields to come together This publication combines machine learning techniques with more conventional knowledge elicitation techniques A framework is presented in which reasoning problem solving and learning together form a knowledge intensive system that can acquire knowledge from its own experience **Second Generation Expert Systems** Jean-Marc David,Jean-Paul Krivine,Reid Simmons,2012-12-06 Second Generation Expert Systems have been a very active field of research during the last years Much work has been carried out to overcome drawbacks of first generation expert systems This book presents an overview and new contributions from people who have played a major role in this evolution It is divided in several sections that cover the main topics of the subject Combining Multiple Reasoning Paradigms Knowledge Level Modelling Knowledge Acquisition in Second Generation Expert Systems Explanation of Reasoning Architectures for Second Generation Expert Systems This book can serve as a reference book for researchers and students and will also be an invaluable help for practitioners involved in KBS developments Research and Development in Expert Systems IX British Computer Society.
