Automatic Algorithm Recognition and Replacement Robert Metzger,Zhaofang Wen,2000-06-02 This book describes a fundamentally new theoretical framework for finding poor algorithms in an application program and replacing them with ones that parallelize the code Parallel computation will become the norm in the coming decades Unfortunately advances in parallel hardware have far outpaced parallel applications of software There are currently two approaches to applying parallelism to applications One is to write completely new applications in new languages But abandoning applications that work is unacceptable to most nonacademic users of high performance computers The other approach is to convert existing applications to a parallel form This can be done manually or automatically Even partial success in doing the job automatically has obvious economic advantages This book describes a fundamentally new theoretical framework for finding poor algorithms in an application program and replacing them with ones that parallelize the code Supercomputing Vladimir Voevodin,Sergey Sobolev,2017-11-14 This book constitutes the refereed proceedings of the Third Russian Supercomputing Days RuSCDays 2017 held in Moscow Russia in September 2017 The 41 revised full papers and one revised short paper presented were carefully reviewed and selected from 120 submissions The papers are organized in topical sections on parallel algorithms supercomputer simulation high performance architectures tools and technologies **Parallel Computing Technologies** Victor Malyshev,2017-08-17 This book constitutes the proceedings of the 14th International Conference on Parallel Computing Technologies PaCT 2017 held in Nizhny Novgorod Russia in September 2017 The 25 full papers and 24 short papers presented were carefully reviewed and selected from 93 submissions The papers are organized in topical sections on mainstream parallel computing parallel models and algorithms in numerical computation cellular automata and discrete event systems organization of parallel computation parallel computing applications Applications of Graph Transformations with Industrial Relevance Andy Schürr,Manfred Nagl,Albert Zündorf,2008-10-15 This book constitutes the thoroughly refereed post conference proceedings of the Third International Symposium on Applications of Graph Transformations AGTIVE 2007 held in Kassel Germany in October 2007 The 30 revised full papers presented together with 2 invited papers were carefully selected from numerous submissions during two rounds of reviewing and improvement The papers are organized in topical sections on graph transformation applications meta modeling and domain specific language new graph transformation approaches program transformation applications dynamic system modeling model driven software development applications queries views and model transformations as well as new pattern matching and rewriting concepts The volume moreover contains 4 papers resulting from the adjacent graph transformation tool contest and concludes with 9 papers summarizing the state of the art of today s available graph transformation environments Automatic Parallelization Christoph W. acceptance and promise to deliver the computing power required to solve the grand challenge problems of Science and Engineering These machines are relatively inexpensive to build and are potentially scalable to large numbers of processors However they are difficult to program the non uniformity of the memory which makes local accesses much faster than the transfer of non local data via message passing operations implies that the locality of algorithms must be exploited in order to achieve acceptable performance The management of data with the twin goals of both spreading the computational workload and minimizing the delays caused when a processor has to wait for non local data becomes of paramount importance When a code is parallelized by hand the programmer must distribute the program s work and data to the processors which will execute it One of the common approaches to do so makes use of the regularity of most numerical computations This is the so called Single Program Multiple Data SPMD or data parallel model of computation With this method the data arrays in the original program are each distributed to the processors establishing an ownership relation and computations defining a data item are performed by the processors owning the data *FPGA 2008* ,2008 *American Book Publishing Record* ,2000
