Automatic Speech Recognition The Development Of The Sphinx Recognition System:

Automatic Speech Recognition Kai-Fu Lee,2012-12-06 Speech Recognition has a long history of being one of the difficult problems in Artificial Intelligence and Computer Science As one goes from problem solving tasks such as puzzles and chess to perceptual tasks such as speech and vision the problem characteristics change dramatically knowledge poor to knowledge rich low data rates to high data rates slow response time minutes to hours to instantaneous response time These characteristics taken together increase the computational complexity of the problem by several orders of magnitude Further speech provides a challenging task domain which embodies many of the requirements of intelligent behavior operate in real time exploit vast amounts of knowledge tolerate errorfull unexpected unknown input use symbols and abstractions communicate in natural language and learn from the environment Voice input to computers offers a number of advantages It provides a natural fast hands free eyes free location free input medium However there are many as yet unsolved problems that prevent routine use of speech as an input device by non experts These include cost real time response speaker independence robustness to variations such as noise microphone speech rate and loudness and the ability to handle non grammatical speech Satisfactory solutions to each of these problems can be expected within the next decade Recognition of unrestricted spontaneous continuous speech appears unsolvable at present However by the addition of simple constraints such as clarification dialog to resolve ambiguity we believe it will be possible to develop systems capable of accepting very large vocabulary continuous speechdictation

Developmental Robotics Angelo Cangelosi,Matthew Schlesinger,2015-01-09 A comprehensive overview of an interdisciplinary approach to robotics that takes direct inspiration from the developmental and learning phenomena observed in children s cognitive development

Developmental robotics is a collaborative and interdisciplinary approach to robotics that is directly inspired by the developmental principles and mechanisms observed in children's cognitive development. It builds on the idea that the robot, using a set of intrinsic developmental principles regulating the real-time interaction of its body, brain, and environment, can autonomously acquire an increasingly complex set of sensorimotor and mental capabilities. This volume, drawing on insights from psychology, computer science, linguistics, neuroscience, and robotics, offers the first comprehensive overview of a rapidly growing field. After providing some essential background information on robotics and developmental psychology, the book looks in detail at how developmental robotics models and experiments have attempted to realize a range of behavioral and cognitive capabilities. The examples in these chapters were chosen because of their direct correspondence with specific issues in child psychology research; each chapter begins with a concise and accessible overview of relevant empirical and theoretical findings in developmental psychology. The chapters cover intrinsic motivation and curiosity, motor development (examining both manipulation and locomotion), perceptual development (including face recognition and perception of space), social learning (emphasizing such phenomena as joint attention and cooperation), language (from phonetic babbling to syntactic processing and abstract knowledge), including models of number learning and reasoning strategies. Boxed text offers technical and methodological details for both psychology and robotics experiments.

Handbook of Natural Language Processing Nitin Indurkha, Fred J. Damerau, 2010-02-22. The *Handbook of Natural Language Processing* Second Edition presents practical tools and techniques for implementing natural language processing in computer systems. Along with removing outdated material, this edition updates every chapter and expands the content to include emerging areas such as sentiment analysis. New to the Second Edition: **Intelligent Information Technologies: Concepts, Methodologies, Tools, and Applications** Sugumaran, Vijayan, 2007-11-30. This set compiles more than 240 chapters from the world's leading experts to provide a foundational body of research to drive further evolution and innovation of these next-generation technologies and their applications, of which scientific, technological, and commercial communities have only begun to scratch the surface.

Innovations in Smart Cities and Applications Mohamed Ben Ahmed, Anouar Abdelhakim Boudhir, 2018-03-21. This proceedings book showcases the latest research work presented at the Second Edition of the Mediterranean Symposium on Smart City Application (SCAMS 2017) which was held in Tangier, Morocco, on October 15-27, 2017. Joshua Thomas,Pandian Vasant,2022-03-15 HANDBOOK OF INTELLIGENT COMPUTING AND OPTIMIZATION FOR SUSTAINABLE DEVELOPMENT This book provides a comprehensive overview of the latest breakthroughs and recent progress in sustainable intelligent computing technologies applications and optimization techniques across various industries Optimization has received enormous attention along with the rapidly increasing use of communication technology and the development of user friendly software and artificial intelligence In almost all human activities there is a desire to deliver the highest possible results with the least amount of effort Moreover optimization is a very well known area with a vast number of applications from route finding problems to medical treatment construction finance accounting engineering and maintenance schedules in plants As far as optimization of real world problems is concerned understanding the nature of the problem and grouping it in a proper class may help the designer employ proper techniques which can solve the problem efficiently Many intelligent optimization techniques can find optimal solutions without the use of objective function and are less prone to local conditions The 41 chapters comprising the Handbook of Intelligent Computing and Optimization for Sustainable Development by subject specialists represent diverse disciplines such as mathematics and computer science electrical and electronics engineering neuroscience and cognitive sciences medicine and social sciences and provide the reader with an integrated understanding of the importance that intelligent computing has in the sustainable development of current societies It discusses the emerging research exploring the theoretical and practical aspects of successfully implementing new and innovative intelligent techniques in a variety of sectors including IoT manufacturing optimization and healthcare Audience It is a pivotal reference source for IT specialists industry professionals managers executives researchers scientists and engineers seeking current research in emerging perspectives in the field of artificial intelligence in the areas of Internet of Things renewable energy optimization and smart cities Utilizing Sphinx-4 on Speech Recognition Marwa Alzayadi,2016 Speech plays an important role for a wide range of technologies and for communication between people Oral speech is translated by Automatic Speech Recognition that works on decoding the speech into text The last five decades have seen a growing trend towards ASR for a wide range of technologies In the history of speech development Sphinx 4 has been thought of as a key factor in the recognition systems and is considered it a flexible recognition framework This report deals with the task of training each corpus separately and generating new acoustic models For building the Language model SLM has been utilized The two different corpora that have been selected in this experiment are TIMIT and AN4 In order to

enhance the Error rate we applied the combination method to decrease it into a very small percentage and compared between the WER before and after the combination This thesis examined the way in which the recognition enhancement emerged from the combination to develop the accuracy and to utilize the new acoustic perfectly with the Recognition System The current study found that WER for TIMIT was 41 0% and the SER approximately 73 5% Another important finding for the AN4 was that 15 5% WER and 46 2% SER Surprisingly training from the combination was lowered into 2 7% WER and 12 2% SER A comparison of the three results reveals the improvement for the recognition rate when we performed the combination and solutions for analyzing each acoustic model that either generated from the one corpus or from the combination
