**Australian Environmental History** Stephen Dovers, 1994 Three overview essays explore the broad nature of Australian landscapes the ways in which we have used and abused them our attitudes toward them and the ways we have perceived them Seven case studies then explore the history of human environment interactions in more detail across a variety of scales of time decades centuries millennia and space sectors regions districts There are analyses of small districts large regions and natural resource sectors from the Great Barrier Reef and the Brigalow domain through the high country to the arid centre In the Conclusion Bill Gammage argues that the critical question facing us is not the current catch phrase sustainable development but sustainable damage how much can our environment take [An Environmental History of Australia](#) Robert Lewis, 2022-01-20 For at least 50 000 years humans have interacted with the Australian environment its land waters animals plants and insects What have we done Why With what impacts and outcomes both positive and negative And what natural aspects of Australia have constrained and controlled how we have used the environment This richly illustrated book draws on primary sources and modern archaeological historical and anthropological research It provides a critical but also empathetic approach that tells a story of the changing attitudes and values that have shaped people s actions over time It will help students and general readers to develop their knowledge and understanding of the human and natural forces movements ideas and people that have created the Australian environment that we share and continue to influence today [Australia, New Zealand, and the Pacific](#) Donald S. Garden, 2005-08-19 A fascinating study of the environmental history of Australia New Zealand and the islands of the Pacific from the time of the dinosaurs to the present day Of interest to students and academics alike this book provides a much needed synthesis of the recent literature on the environmental history of Australia and Oceania Part of ABC CLIO s Nature and Human Societies series this book maps out the key trends in the region s environmental history charting the creation of the Australian continent from the ancient land mass of Gondwanaland to the arrival of humans Especially fascinating are the chapters highlighting how successive waves of human migration created environmental havoc throughout the region leading to the collapse of the Easter Island civilization and the spread of nonindigenous flora and fauna From the controversies over the reasons why creatures such as the marsupial lion and the giant kangaroo became extinct to such contemporary problems as deforestation and global warming this book contains sobering lessons for us all **An Environmental History of Australian Rainforests until 1939** Warwick Frost, 2020-06-10 This book provides a comprehensive environmental history of how Australia s rainforests developed the influence of Aborigines and pioneers farmers and loggers and of efforts to protect rainforests to help us better understand current issues and debates surrounding their conservation and use While interest in rainforests and the movement for their conservation are often mistakenly portrayed as features of the last few decades the debate over human usage of rainforests stretches well back into the nineteenth century In the modern world rainforests are generally considered the most attractive

of the ecosystems being seen as lush vibrant immense mysterious spiritual and romantic Rainforests hold a special place both providing a direct link to Gondwanaland and the dinosaurs and today being the home of endangered species and highly rich in biodiversity They are also a critical part of Australia s heritage Indeed large areas of Australian rainforests are now covered by World Heritage Listing However they also represent a dissonant heritage What exactly constitutes rainforest how it should be managed and used and how much should be protected are all issues which remain hotly contested Debates around rainforests are particularly dominated by the contradiction of competing views and uses seeing rainforests either as untapped resources for agriculture and forestry versus valuing and preserving them as attractive and sublime natural wonders Australia fits into this global story as a prime example but is also of interest for its aspects that are exceptional including the intensity of clearing at certain periods and for its place in the early development of national parks This book will be of great interest to students and scholars of Environmental History Australian History and Comparative History A Companion to Global Environmental History J. **From Plesiosaurs to People**, 1998 The most critical challenge imaginable faces Australians as the twenty first century races to meet us we must shift our economic systems to an ecologically sustainable basis or prepare for an economic crisis of unprecedented proportions The regional national and even global consequences of our present modes of production and consumption guarantee that if we do not rapidly refocus our goals future welfare will decline as our environments degenerate Economic social political and technological factors that frustrate the achievement of sustainability must be identified and disempowered We need to understand the geological climatic and biological processes that interacted to shape this land and its inhabitants before we can disentangle the factors that threaten our future from among those that make up our complex societies Only with this understanding will we find Australia's unique identity the real nature of the land that underpins and sustains us
