Writing an effective manuscript is one of the pivotal steps in the successful closure of the research project, and getting it published in a peer-reviewed and indexed journal adds to the academic profile of a researcher. Writing and publishing a scientific paper is a tough task that researchers and academicians must endure in staying relevant in the field. Success in translating the benchwork into the scientific content, which is effectively communicated within the scientific field, is used in evaluating the researcher in the current academic world. Writing is a highly time-consuming and skill-oriented process that requires familiarity with the numerous publishing steps, formatting rules, and ethical guidelines currently in vogue in the publishing industry. In this review, we have attempted to include the essential information that novice authors in their early careers need to possess, to be able to write a decent first scientific manuscript ready for submission in the journal of choice. This review is unique in providing essential guidance in a simple point-wise manner in conjunction with easy-to-understand illustrations to familiarize novice researchers with the anatomy of a basic scientific manuscript.

1. Background

Communication is the pivotal key to the growth of scientific literature. Successfully written scientific communication in the form of any type of paper is needed by researchers and academicians alike for various reasons such as receiving degrees, getting a promotion, becoming experts in the field, and having editorships [1, 2].

Here, in this review, we present the organization and anatomy of a scientific manuscript enlisting the essential features that authors should keep in their mind while writing a manuscript.

2. Types of Manuscripts

Numerous types of manuscripts do exist, which can be written by the authors for a possible publication (Figure 1).

Primarily, the choice is dependent upon the sort of communication authors want to make. The simplest among the scientific manuscripts is the "Letter to an Editor," while "Systematic Review" is complex in its content and context [3].

3. Anatomy of the Manuscript

Writing and publishing an effective and well-communicative scientific manuscript is arguably one of the most daunting yet important tasks of any successful research project. It is only through publishing the data that an author gets the recognition of the work, gets established as an expert, and becomes citable in the scientific field [4]. Among the numerous types of scientific manuscripts which an author can write (Figure 1), original research remains central to most publications [4–10].
