**Autoimmune Diseases of the Endocrine System** Robert Volpe',1990-10-05 This book is a comprehensive easy to read discussion of the organ specific autoimmune endocrine diseases emphasizing new contributions and trends for research and management It begins with a brief chapter introducing the general principles of immunology followed by discussions covering topics such as immunogenetics and animal models and how they can be applied toward interpreting human autoimmune endocrine diseases autoimmune thyroid diseases insulin dependent diabetes mellitus hypophysitis and Addison s disease The book also discusses future trends toward gaining an understanding of these disorders and possible therapeutic principles It is well illustrated and will prove to be a useful reference source for internists endocrinologists and postgraduate students interested in human autoimmune endocrine diseases Endocrine Autoimmunity and Associated Conditions A.P.

Weetman,2012-12-06 Autoimmunity is the most common cause of endocrine disorders This volume provides an up to date summary of recent advances in this important field In addition it describes developments in our understanding of conditions such as vitiligo and pernicious anaemia which are frequently associated with autoimmune endocrinopathies There is a detailed review of animal models of endocrine disease which have contributed greatly to current knowledge Furthermore the aetiology pathogenesis and treatment of the clinical disorders are discussed in depth The book will be of interest to anyone working in the areas of endocrinology and immunology *Autoimmune Endocrine Disease* Anthony P. Autoimmune Diseases in Endocrinology Anthony P. Weetman,2007-12-26 Autoimmune Diseases in Endocrinology is a comprehensive and novel text that examines key features that predispose individuals to autoimmune diseases The text begins with three introductory chapters which provide sufficient information so that anyone including those without a background in recent immunology will be able to understand the developments in the field The next and largest section of the book concerns autoimmune thyroid disease and authors of these chapters take the reader through the basic epidemiology genetic and environmental risk factors immunopathogenesis and the diagnostic and management aspect of the disease The next section discusses Type 1 diabetes mellitus In the final section authors explain other autoimmune endocrinopathies including Addison s disease premature ovarian failure autoimmune hypophysitis and autoimmune polyglandular syndrome types 1 and 2 Comprehensive and timely Autoimmune Diseases in Endocrinology will become an essential reference for all

endocrinologists and internal medicine practitioners working in this field Autoimmunity and Endocrine Disease Robert Volpé,1985 Autoimmune Endocrinopathies Robert Volpé,1999-06-04 Dr Robert Volp and his distinguished contributors comprehensively review the latest thinking about the theoretical experimental and clinical aspects of autoimmune endocrine disorders These world renowned experts examine the pathogenesis and immunogenetics of these diseases discuss the role of sex hormones in autoimmunity and elucidate the nature of autoantigens They also provide clinical detail on a wide variety of autoimmune endocrinopathies including autoimmune thyroid disease Graves ophthalmopathy and dermopathy human insulin

dependent diabetes mellitus and autoimmune adrenocortical failure Postpartum autoimmune endocrine syndromes autoimmune hypophysitis and the polyglandular autoimmune syndromes are also discussed in detail Comprehensive and authoritative Autoimmune Endocrinopathies provides today's most up to date understanding of the etiology and pathogenesis of autoimmune endocrine diseases *Autoimmune Endocrine Disease* Terry Francis Davies, 1983 **Auto-immunity in the Endocrine System** R. Volpe, 2012-12-06 The present monograph will concern itself with those disorders of the endocrine system either associated with destruction interference with function or hyper function which are considered to be due to autoimmune processes Endocrinopathies Non endocrine autoimmune disorders associated with the endocrinopathies Graves Basedow's Parry's disease Pernicious anaemia Hashimoto's thyroiditis Vitiligo Idiopathic Addison's disease Myasthenia gravis Insulinopenic diabetes mellitus Sjogren's syndrome Auto immune oophoritis and orchitis Rheumatoid arthritis Auto immune hypoparathyroidism Idiopathic thrombocytopenic purpura Auto immune hypophysitis Chronic active hepatitis Possibly some cases of infertility Primary biliary cirrhosis due to anti sperm antibodies Reproduced with permission from Volpe 1977 The above table indicates those organ specific endocrinopathies considered to be due to autoimmune factors as well as those non endocrine organ specific autoimmune disorders which may be associated with them Volpe 1977 It is evident that such disorders occurring without any obvious external cause raise the very elementary question of how immune processes directed against self constituents could be initiated Generally of course the immune system acts as a regulatory and defence mechanism and disorders of auto immunity represent breakdowns in this regulatory system The following chapters will be concerned with the individual components of the endocrine system so affected by autoimmune processes it will first be necessary to provide an initial chapter for the purpose of summarizing some general principles of immunology in order to place the immune disorders of the endocrine system in context Autoimmune Endocrine Disease P. Kendall-Taylor, 1995-01 Includes chapters covering the following topics the basis of autoimmunity infection and autoimmune endocrine diseases thyroid associated ophthalmopathy and animal models of autoimmune endocrine disease and their uses in developing new methods of intervention *Immunologically Mediated Endocrine Diseases* Ronald G. Gill, Joan T. Harmon, Noel K. McGregor,2012-12-06 Nineteen eighty six is a most appropriate year in which to be writing about developments in the organ specific autoimmune endocrine diseases It celebrates the publication 30 years ago in 1956 of the classic papers of Roitt and Doniach and their co workers 1 and of Rose and Witebsky<sup>2</sup> and Adams<sup>3</sup> and Purves These three sets of fundamental observations provided the initial building blocks upon which much of what has

been established in the field in the last 30 years was built. No publication of this nature on endocrine autoimmune disease can cover every aspect of the subject. I have chosen to highlight the organs thyroid and pancreas which have attracted the most attention and the areas of work within these fields within which most research effort is currently focused. There are still some gaps. The insulin and TSH receptors are not considered nor in any detail are the role of cytotoxic mechanisms in mediating gland destruction. Molecular biology will undoubtedly in the next few years clarify once and for all the controversy that surrounds the structure of the TSH receptor and T cell cloning the role of cell mediated cytotoxicity. The pathogenetic mechanisms underlying autoimmunity are increasingly well understood and the search for the aetiology has begun.
