Automated External Defibrillation:

AED American Academy of Orthopaedic Surgeons (AAOS),2004-06-28 This Fourth Edition is designed to facilitate the efficient training testing and retesting in the use of AEDs Automated External Defibrillation James M. Drake,James W. Drake,2000 For courses in Automated External Defibrillation This new comprehensive stand alone manual emphasizes the basic principles of the AED as well as reinforcing the cognitive affective and psychomotor skills necessary for using the AED in a cardiac arrest situation AED National Safety Council,2001 Early Access to Automated External Defibrillators Craig Hartpence,2010-07-19 Early Access to Automated External Defibrillators is a step by step program on how to construct and maintain a Public Access Defibrillation Program for your Church Business or outdoor event The AED is new technology that can be used by the public to save a life If this device is applied within 4 minutes or less it could increase survival rate to 89% In less than 2 minutes increases possibility to 98% Seconds count in Sudden Cardiac Arrest For each minute you are down in full arrest you loose 10% of your life The only thing that can save your life is an electrical shock from an AED After 4 minutes you slide into physical death chances of survival decrease This manual shows you how to obtain Medical Direction for your program and Calculation formulas to decide your response time and number of AED s to place The author of this manual has actual experienced using these devices in the public setting with great success For more information go to www.aedmeddirect.com Automated External Defibrillation National Safety Council,1998 **Automated External Defibrillation (AED)** ,1992 **Colorado Automated External Defibrillation Program Annual Report, 1995** ,1996 Emergency ,2005 Textbook for EMT training The DVD walks students through the skills necessary to pass the EMT Basic practical exam **Use of Automated External Defibrillators** ,2009 In an effort to improve survival from cardiac arrest the American Heart Association AHA has promoted the Chain of Survival concept describing a sequence of prehospital steps that result in improved survival after sudden cardiac arrest These interventions include immediate deployment of emergency medical services prompt cardiopulmonary resuscitation early defibrillation when indicated and early initiation of advanced medical care Early defibrillation has emerged as the most important intervention with survival decreasing by 10% with each minute of delay in defibrillation Ventricular Fibrillation VF is a condition in which there is uncoordinated contraction of the heart cardiac muscle of the ventricles in the heart making them tremble rather than contract properly VF is a medical emergency and if the arrhythmia continues for more than a few seconds blood circulation will cease and death can occur in a matter of minutes During VF contractions of the heart are not synchronized blood flow ceases organs begin to fail from oxygen deprivation and within 10 minutes death will occur When VF occurs the victim must be defibrillated in order to establish the heart s normal rhythm On average the wait for an ambulance in populated areas of the United States is about 11 minutes In view of these facts the EFCOG Electrical Safety Task Group initiated this review to evaluate the potential value of deployment and use of automated external defibrillators AEDs for treatment of SCA victims This evaluation indicates the

long term survival benefit to victims of SCA is high if treated with CPR plus defibrillation within the first 3 5 minutes after collapse According to the American Heart Association AHA survival rates as high as 74% are possible if treatment and defibrillation is performed in the first 3 minutes In contrast survival rates are only 5% where no AED programs have been established to provide prompt CPR and defibrillation CPR statistics American Heart Association Early intervention with both CPR and defibrillation can result in high long term survival rates for SCA as demonstrated by a study investigating the beneficial effects of AED devices at Chicago s O Hare and Midway airports The American Medical Association AMA advocates the widespread placement of AEDs AMA Res 413 A 02 Res 424 A 04 supports increasing government and industry funding for the purchase of AED devices and encourages the American public to become trained in CPR and the use of AEDs Some states including Maryland have enacted legislation requiring AED devices and a certified responder be available at high school and school sponsored athletic events due the risk of SCA to athletes the most common cause of death in young athletes Ensuring AED availability at Department of Energy DOE sites would serve as a means of preventative intervention for over 14 000 DOE employees and 193 000 contract workers It is estimated 1 per 1 000 adults 35 years of age and older will experience SCA in a given year
