Duffy, 2019-07-19 Automatic Transmissions and Transaxles covers the design construction operation diagnosis service and repair of major automatic transmission and transaxle components Both hydraulic and electronic transmission controls are detailed with extensive coverage of electronic control systems The use of the latest diagnostic equipment to troubleshoot electronic transmission and transaxle control systems is emphasized This text is correlated to the Automatic Transmission and Transaxle section of the ASE Education Foundation Task List and is a valuable resource for those preparing for ASE Certification Test A2 Automatic Transmission Transaxle

Passenger Car and Light Truck Automatic Transmission and Automatic Transaxle Test Code Automatic Transmission and Transaxle Committee, 2005 To provide a means of obtaining the performance characteristics of automatic transmissions and automatic transaxles It outlines dynamometer tests that map the steady state characteristics over a range of operations of an automatic transmission automatic transaxle and provides a method of presenting test data This procedure must be followed with similar test facilities so that results obtained from different laboratories are comparable For this SAE Recommended Practice the transmission is defined as the complete automatic transmission or transaxle assembly between the engine and the driveshaft s used to effect a ratio change in transmitting power This test procedure deals with the aspect of conducting complete transmission and transaxle assembly testing However by its very nature a transmission should be viewed as a compilation of three major component systems pump torque converter and gearbox all ratio change elements From a design perspective it is important that the losses associated with each of these components be determined by conducting separate tests of each component under controlled test conditions that simulate the in transmission operating conditions Torque converter testing is described in SAE J643 If done with strict attention to detail it is possible to subtract off the pump and torque converter losses from the transmission assembly losses in order to obtain gearbox losses only eliminating the need to conduct a separate gearbox test
