Ethical Practices for Sustainable Construction Digitalisation Olugbenga Olatinrin, Douglas Aghimien, Steve Goodhew, 2025-09-30. This volume provides a framework for ethical and sustainable digitalization in the construction industry. The fourth industrial revolution has significantly changed how industries worldwide operate and deliver their products and services. This paradigm shift has brought with it ubiquitous emerging physical, biological, and digital technologies that are disrupting activities in industries across the globe. The construction industry is not immune to the disruption of these technologies. From solving the issues of poor cost, time, and quality that has bedevilled the industry for a long while to ensuring clients are satisfied and workers are safe, digital technologies have proven to be effective in improving how the construction industry functions. For instance, the use of building information modelling has garnered considerable attention in addressing salient design and collaboration issues among others facing the industry. In the same vein, the internet of things, big data, analytics, cloud computing, drones, robotics, sensors, and a host of other technologies have been explored to improve the management and delivery of construction projects. Regrettably, this concept of ethics has been downplayed in the quest for the digital transformation of construction industries worldwide. For the successful digitalisation of the construction industry, which relies heavily on human interaction with technology, the role of ethics cannot be overlooked. There is an absence of a roadmap for the ethical use of digital technologies in the digitalisation of the construction industry. This book, which is designed to give direction for the ethical use of digital tools in the construction industry, fills that gap.
