*Automorphic Representations of Unitary Groups in Three Variables* Jonathan David Rogawski, 1990-09-21 The purpose of this book is to develop the stable trace formula for unitary groups in three variables The stable trace formula is then applied to obtain a classification of automorphic representations This work represents the first case in which the stable trace formula has been worked out beyond the case of  $SL_2$  and related groups Many phenomena which will appear in the general case present themselves already for these unitary groups [Automorphic Representations of Unitary Groups in Three Variables](#)

Jonathan David Rogawski, 1990 The purpose of this book is to develop the stable trace formula for unitary groups in three variables The stable trace formula is then applied to obtain a classification of automorphic representations This work represents the first case in which the stable trace formula has been worked out beyond the case of  $SL_2$  and related groups Many phenomena which will appear in the general case present themselves already for these unitary groups **Endoscopic**

**Classification of Representations of Quasi-Split Unitary Groups** Chung Pang Mok, 2015-04-09 In this paper the author establishes the endoscopic classification of tempered representations of quasi split unitary groups over local fields and the endoscopic classification of the discrete automorphic spectrum of quasi split unitary groups over global number fields The method is analogous to the work of Arthur on orthogonal and symplectic groups based on the theory of endoscopy and the comparison of trace formulas on unitary groups and general linear groups **Harmonic Analysis, the Trace Formula, and Shimura Varieties**

Clay Mathematics Institute. Summer School, 2005 Langlands program proposes fundamental relations that tie arithmetic information from number theory and algebraic geometry with analytic information from harmonic analysis and group representations This title intends to provide an entry point into this exciting and challenging field *Regulators in Analysis, Geometry and Number Theory* Alexander Reznikov, Norbert Schappacher, 2012-12-06 This

book is an outgrowth of the Workshop on Regulators in Analysis Geometry and Number Theory held at the Edmund Landau Center for Research in Mathematical Analysis of The Hebrew University of Jerusalem in 1996 During the preparation and the holding of the workshop we were greatly helped by the director of the Landau Center Lior Tsafiri during the time of the planning of the conference and Hershel Farkas during the meeting itself Organizing and running this workshop was a true pleasure thanks to the expert technical help provided by the Landau Center in general and by its secretary Simcha Kojman in particular We would like to express our hearty thanks to all of them However the articles assembled in the present volume do not represent the proceedings of this workshop neither could all contributors to the book make it to the meeting nor do the contributions herein necessarily reflect talks given in Jerusalem In the introduction we outline our view of the theory to which this volume intends to contribute The crucial objective of the present volume is to bring together concepts methods and results from analysis differential as well as algebraic geometry and number theory in order to work towards a deeper and more comprehensive understanding of regulators and secondary invariants Our thanks go to all the participants of the

workshop and authors of this volume May the readers of this book enjoy and profit from the combination of mathematical ideas here documented *Featured Reviews in Mathematical Reviews 1997-1999* Donald G. Babbitt, Jane E.

Kister, 2000-05-05 This second volume of *Featured Reviews* makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following *Homological Algebra* by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild *Faisceaux algébriques cohérents* by Jean Pierre Serre reviewed by C Chevalley and *On the Theory of General Partial Differential Operators* by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR

**Hessian Polyhedra, Invariant Theory And Appell Hypergeometric Functions** Lei Yang, 2018-03-13 Our book gives the complex counterpart of Klein's classic book on the icosahedron We show that the following four apparently disjoint theories the symmetries of the Hessian polyhedra geometry the resolution of some system of algebraic equations algebra the system of partial differential equations of Appell hypergeometric functions analysis and the modular equation of Picard modular functions arithmetic are in fact dominated by the structure of a single object the Hessian group  $G_{216}$  It provides another beautiful example on the fundamental unity of mathematics

**Motives**, 1994-02-28 Motives were introduced in the mid 1960s by Grothendieck to explain the analogies among the various cohomology theories for algebraic varieties to play the role of the missing rational cohomology and to provide a blueprint for proving Weil's conjectures about the zeta function of a variety over a finite field Over the last ten years or so researchers in various areas Hodge theory algebraic K theory polylogarithms automorphic forms L functions  $\ell$ -adic representations trigonometric sums and algebraic cycles have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area Thus the theory holds the potential of enriching and unifying these areas This is one of two volumes containing the revised texts of nearly all the lectures presented at the AMS IMS SIAM Joint Summer Research Conference on Motives held in Seattle in 1991 A number of related works are also included making for a total of forty seven papers from general introductions to specialized surveys to research papers

**On Certain L-Functions** James Arthur, 2011 This volume constitutes the proceedings of a conference On Certain L functions held July 23-27 2007 at Purdue University West Lafayette Indiana The conference was organised in honour of the 60th birthday of Freydoon Shahidi widely recognised as having made groundbreaking contributions to the Langlands programme The articles in this volume represent a snapshot of the state of the field from several viewpoints Contributions illuminate various areas of the study of geometric analytic and number theoretic aspects of automorphic forms and their L functions and both local and

global theory are addressed Topics discussed in the articles include Langlands functoriality the Rankin Selberg method the Langlands Shahidi method motivic Galois groups Shimura varieties orbital integrals representations of p adic groups Plancherel formula and its consequences the Gross Prasad conjecture and more The volume also includes an expository article on Shahidi s contributions to the field which serves as an introduction to the subject Experts will find this book a useful reference and beginning researchers will be able to use it to survey major results in the Langlands programme

Cohomology of Arithmetic Groups and Automorphic Forms Jean-Pierre Labesse, Joachim Schwermer, 1990 Expansions of talks given at the conference held May 1989 Marseilles France Topics include modular symbols Eisenstein series and cohomology finiteness theorems for ball lattices Hilbert modular forms Lefschetz numbers for arithmetic groups Annotation copyrighted by Book News Inc Portland OR **Automorphic Forms, Shimura Varieties, and L-functions** Laurent Clozel, J. Centre de recherches mathématiques, 1992 Although they are central objects in the theory of diophantine equations the zeta functions of Hasse Weil are not well understood One large class of varieties whose zeta functions are perhaps within reach are those attached to discrete groups generically called Shimura varieties The techniques involved are difficult representation theory and harmonic analysis the trace formula and endoscopy intersection cohomology and L2 cohomology and abelian varieties with complex multiplication The simplest Shimura varieties for which all attendant problems occur are those attached to unitary groups in three variables over imaginary quadratic fields referred to in this volume as Picard modular surfaces The contributors have provided a coherent and thorough account of necessary ideas and techniques many of which are novel and not previously published **Orbites unipotentes et représentations** Société Mathématique de France, 1989 *Orbites Unipotentes Et Représentations*, 1988 **Annales Scientifiques de L'École Normale Supérieure** École normale supérieure (France), 2011
