Theory And Technique Of Latin-American Dancing Frank Borrows,2013-04-18 This early work on dancing is a fascinating read for any dance enthusiast or historian and contains much information that is still useful and practical today Contents Include Dedication Author s Preface Introduction The History of Latin American Dancing in this Country List of Abbreviations Used the Rumba The Samba The Paso Doble The Jive Swing The Blues Jive The Congo Examination Work Latin American Dances for Class Teaching The Training of Medallists in the Latin American Dancers Music for Latin American Dances The Character of the Latin American Dances and How to Obtain It Postscript and Index Many of the earliest books particularly those dating back to the 1900s and before are now extremely scarce and increasingly expensive We are republishing these classic works in affordable high quality modern editions using the original text and artwork A Generative Theory of Shape Michael Leyton,2003-06-30 The purpose of this book is to develop a generative theory of shape that has two properties we regard as fundamental to intelligence 1 maximization of transfer whenever possible new structure should be described as the transfer of existing structure and 2 maximization of recoverability the generative operations in the theory must allow maximal inferentiability from data sets We shall show that if generativity satisfies these two basic criteria of intelligence then it has a powerful mathematical structure and considerable applicability to the computational disciplines The requirement of intelligence is particularly important in the generation of complex shape There are plenty of theories of shape that make the generation of complex shape unintelligible However our theory takes the opposite direction we are concerned with the conversion of complexity into understandability In this we will develop a mathematical theory of understandability The issue of understandability comes down to the two basic principles of intelligence maximization of transfer and maximization of recoverability We shall show how to formulate these conditions group theoretically 1 Maximization of transfer will be formulated in terms of wreath products Wreath products are groups in which there is an upper subgroup which we will call a control group that transfers a lower subgroup which we will call a fiber group onto copies of itself 2 maximization of recoverability is insured when the control group is symmetry breaking with respect to the fiber group *Taxes on Incomes, Inheritances, and Gifts* United States.
