D. Pickard, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbuhl Thus were established the principles of European co operation which have been born from the

European spirit flourished in the European Association and have been associated throughout with this sense. The fact that the English language is now the international medium for communication at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume for scrutiny and suggestions for revision. Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made. The contributions are written by specialists in the given fields and constitute the first part of each volume.

This volume reviews standard treatments for spinal dural arteriovenous fistulas examining the anatomy of arteries and veins of the sylvian fissure as well as microsurgical advances and the development of modern therapeutic strategies in intracranial meningiomas. The advances section presents a strategy for minimizing hearing loss after stereotactic radiosurgery for vestibular schwannomas as well as a description of the mode of action and biology of ALA including its interaction with tumor cells and the limits of this method. A dedicated chapter addresses the essential question of the limits and merits of various tractography techniques and of their importance for non specialists who may be tempted to use them uncritically. A further chapter examines molecular markers which have become standard in neuropathological reports on intracranial tumors reviewing the prognostic and predictive value of these modern molecular markers in gliomas. Additional chapters round out the coverage offering a comprehensive overview of standard and advanced techniques.
