The completion of this collection took many months and for a variety of reasons required the assistance and/or indulgence of a number of individuals. First and foremost I would like to thank Tim Hudson for his useful input and support at the outset of the project. Likewise I would like to thank Jesse O. McKee for providing a hospitable environment during my affiliation with the University of Southern Mississippi. At Louisiana State University I am grateful to Sam Hilliard and Carville Earle for their invaluable understanding. The book became part of the GeoJournal Library as a result of Wolf Tietze's confidence in the topic and because of Henri G. van Dorssen's and Kluwer Academic Publishers' good nabire despite numerous problems. Curtis C. Roseman and the remainder of the Geography Department at the University of Southern California where I completed many last-minute details for the volume are to be thanked for the cordial and warm environment I received while a visitor in Los Angeles. Finally, no multi-authored collection reaches completion without the help of many patient contributors. This particular book suffered many setbacks along the way, so I am particularly grateful to the authors herein. They demonstrated their compassion and exceptional professionalism throughout by never second-guessing my decisions and by allowing me to remedy the setbacks in my own way. They were a pleasure to work with and they should take pride in their achievements.

Oya, 2013-12-21
There are many natural hazards such as floods, landslides, volcanoes, and earthquakes in the Asia-Pacific Region. Nevertheless, there are few studies of such natural hazards in this region, and knowledge about their mitigation is of the utmost importance. This book documents the use of geomorphological maps showing the state of flooding; these maps allow predictions to be made. The author has compiled geomorphological maps and documentation of their validation, and the maps allow not only estimation of flooding but also prediction of soil liquefaction caused by earthquakes. Audience: The results of the discussions in this book apply not only to geographers, consultants, engineers, and policy makers in Japan and Southeast Asian countries but also to those from Europe, North America, and Africa.

Thompson, 1995-06-20 Geomorphology and Land Management in a Changing Environment Edited by Duncan F M McGregor and Donald A Thompson Royal Holloway University of London UK Geomorphology and Land Management in a Changing Environment highlights the practical application of geography to environmental management through examination of the ways in which geomorphology is relevant to and contributes to proper management of land resources Increasingly effective land use is seen as dependent on the integration of geomorphological principles and practice within the decision making process The book elucidates the environmental effects of land management practices in terms of the geomorphological systems in which they take place and in the context of an environment subject to uncertainty and change It critically reviews the progress of applied geomorphology in addressing the issues of practical applicability of

geomorphology and then focuses on four major themes within this interaction ground instability and land management the effect of land use on the hydrological and erosional response of geomorphological systems modelling geomorphological response to environmental change and geomorphological aspects of the management of environmental risk By integrating a wide range of case studies from the developed and the developing world the book offers a distinctive insight into the range and utility of geomorphological research and pointers for environmental planners and decision makers at all levels
