**Beam Processing and Laser Chemistry** I.W. Boyd, E. Rimini, 1990-02-01 This volume discusses both the practical and theoretical aspects of energy beam materials processing. It highlights the recent advances in the use of beams and incoherent light sources to enhance or modify chemical processes at solid surfaces. Special attention is given to the latest developments in the use of ion, electron, and photon beams and on laser-assisted process chemistry. Thin film and surface and interface reactions as well as bulk phase transformations are discussed. Practical technological details and the criteria for present and future applications are also reviewed. The papers collected in this volume reflect the continuing strong interest and variety of development in this field. *Beam Processing and Laser Chemistry* Ian W. Boyd, Emanuele Rimini, European Materials Research Society, Symposium D on beam processing and laser chemistry of the 1989 E-MRS spring conference, 1989 *Laser Processing and Chemistry* Dieter Bäuerle, 2013-03-09 *Laser Processing and Chemistry* gives an overview of the fundamentals and applications of laser-matter interactions in particular with regard to laser material processing. Special attention is given to laser-induced physical and chemical processes at gas-solid, liquid-solid, and solid-solid interfaces. Starting with the background physics, the book proceeds to examine applications of laser techniques in micro-machining and the patterning, coating, and modification of material surfaces. Students, engineers, and manufacturers alike will find this book an invaluable reference work for the state of the art in laser processing. *C, H, N and O in Si and Characterization and Simulation of Materials and Processes* A. Borghesi, U.M. Gösele, J. Vanhellemont, A.M. Gué, M. Djafari-Rouhani, 2012-12-02 Containing over 200 papers, this volume contains the proceedings of two symposia in the E-MRS series. Part I presents a state-of-the-art review of the topic Carbon, Hydrogen, Nitrogen, and Oxygen in Silicon and in Other Elemental Semiconductors. There was strong representation from the industrial laboratories illustrating that the topic is highly relevant for the semiconductor industry. The second part of the volume deals with a topic which is undergoing a process of convergence with two concerns that are more particularly application-oriented. Firstly, the advanced instrumentation which through the use of atomic force and tunnel microscopies, high-resolution electron microscopy, and other high-precision analysis instruments now allows for direct access to atomic mechanisms. Secondly, the technological development which in all areas of applications, particularly in the field of microelectronics and microsystems, requires as a result of the miniaturisation race a precise mastery of the microscopic mechanisms. *Spatial Inhomogeneities and Transient Behaviour in Chemical Kinetics* Peter Gray, Université libre de Bruxelles, University of Leeds, 1990 The results of an International Conference on the title held in Brussels, Belgium, Aug-Sept 1987.
