A1 Subgroups Of Exceptional Algebraic Groups:

\$A_1\$ Subgroups of Exceptional Algebraic Groups Ross Lawther, Donna M. Testerman, 1999 This book is intended for graduate students and research mathematicians interested in group theory and generalizations **The Irreducible Subgroups of Exceptional Algebraic Groups** Adam R. Thomas, 2021-06-18 This paper is a contribution to the study of the subgroup structure of exceptional algebraic groups over algebraically closed fields of arbitrary characteristic Following Serre a closed subgroup of a semisimple algebraic group G is called irreducible if it lies in no proper parabolic subgroup of G In this paper we complete the classification of irreducible connected subgroups of exceptional algebraic groups providing an explicit set of representatives for the conjugacy classes of such subgroups Many consequences of this classification are also given These include results concerning the representations of such subgroups on various G modules for example the conjugacy classes of irreducible connected subgroups are determined by their composition factors on the adjoint module of G with one exception A result of Liebeck and Testerman shows that each irreducible connected subgroup X of G has only finitely many overgroups and hence the overgroups of X form a lattice We provide tables that give representatives of each conjugacy class of connected overgroups within this lattice structure We use this to prove results concerning the subgroup structure of G for example when the characteristic is 2 there exists a maximal connected subgroup of G containing a conjugate of every irreducible subgroup A_1 of G *Reductive Subgroups of Exceptional Algebraic Groups* Martin W. Liebeck, Gary M. Seitz, 1996 The theory of simple algebraic groups is important in many areas of mathematics The authors of this book investigate the subgroups of certain types of simple algebraic groups and obtain a complete description of all those subgroups which are themselves simple This description is particularly useful in understanding centralizers of subgroups and restrictions of representations **Algebraic Groups and their Representations** R.W. Carter, J. Saxl, 2012-12-06 This volume contains 19 articles written by speakers at the Advanced Study Institute on Modular representations and subgroup structure of algebraic groups and related finite groups held at the Isaac Newton Institute Cambridge from 23rd June to 4th July 1997 We acknowledge with gratitude the financial support given by the NATO Science Committee to enable this ASI to take place Generous financial support was also provided by the European Union We are also pleased to acknowledge funds given by EPSRC to the Newton Institute which were used to support the meeting It is a pleasure to thank the Director of the Isaac Newton Institute Professor Keith Moffatt and the staff of the Institute for their dedicated work which did so much to further the success of the meeting The editors wish to thank Dr Ross Lawther and Dr Nick Inglis most warmly for their help in the production of this volume Dr Lawther in particular made an invaluable contribution in preparing the volume for submission to the publishers Finally we wish to thank the distinguished speakers at the ASI who agreed to write articles for this volume based on their lectures at the meeting We hope that the volume will stimulate further significant advances in the theory of algebraic groups *Finite and Locally Finite Groups* B. Hartley, G.M. Seitz, A.V. Borovik, R.M. Bryant, 2012-12-06

This volume contains the proceedings of the NATO Advanced Study Institute on Finite and Locally Finite Groups held in Istanbul Turkey 14-27 August 1994 at which there were about 90 participants from some 16 different countries. The ASI received generous financial support from the Scientific Affairs Division of NATO.

INTRODUCTION A locally finite group is a group in which every finite set of elements is contained in a finite subgroup. The study of locally finite groups began with Schur's result that a periodic linear group is in fact locally finite. The simple locally finite groups are of particular interest. In view of the classification of the finite simple groups and advances in representation theory, it is natural to pursue classification theorems for simple locally finite groups. This was one of the central themes of the Istanbul conference and significant progress is reported herein. The theory of simple locally finite groups intersects many areas of group theory and representation theory, so this served as a focus for several articles in the volume. Every simple locally finite group has what is known as a Kegel cover. This is a collection of pairs (G_i, N_i) where I is an index set, each group G_i is finite, N_i is a normal subgroup of G_i , and $G = \langle \bigcup_i G_i \rangle$.

The Maximal Subgroups of Positive Dimension in Exceptional Algebraic Groups Martin W. Liebeck, Gary M. Seitz, 2004. Intends to complete the determination of the maximal subgroups of positive dimension in simple algebraic groups of exceptional type over algebraically closed fields. This title follows work of Dynkin who solved the problem in characteristic zero and Seitz who did likewise over fields whose characteristic is not too small.

Group Representation Theory Meinolf Geck, 2007-05-07. After the pioneering work of Brauer in the middle of the 20th century in the area of the representation theory of groups, many entirely new developments have taken place and the field has grown into a very large field of study. This progress and the remaining open problems, e.g. the conjectures of Alperin, Dade, Broué, James, etc., have ensured that group representation theory remains a lively area of research. In this book, the leading researchers in the field contribute a chapter in their field of specialty: namely Broué, Finite reductive groups and p -modules; Carlson, Cohomology and representations of finite groups; Geck, Representations of Hecke algebras; Seitz, Topics in algebraic groups; Kessar and Linckelmann, Fusion systems and blocks; Serre, On finite subgroups of Lie groups; Th. Venaz, The classification of endo-permutation modules; and Webb, Representations and cohomology of categories.

Unipotent and Nilpotent Classes in Simple Algebraic Groups and Lie Algebras Martin W. Liebeck, Gary M. Seitz, 2012-01-25. This book concerns the theory of unipotent elements in simple algebraic groups over algebraically closed or finite fields and nilpotent elements in the corresponding simple Lie algebras. These topics have been an important area of study for decades with applications to representation theory, character theory, the subgroup structure of algebraic groups and finite groups, and the classification of the finite simple groups. The main focus is on obtaining full information on class representatives and centralizers of unipotent and nilpotent elements. Although there is a substantial literature on this topic, this book is the first single source where such information is presented completely in all characteristics. In addition, many of the results are new, for example those concerning centralizers of nilpotent elements in small characteristics. Indeed, the whole approach while using some ideas from the literature is novel and yields many new

general and specific facts concerning the structure and embeddings of centralizers **On Non-Generic Finite Subgroups of Exceptional Algebraic Groups** Alastair J. Litterick, 2018-05-29 The study of finite subgroups of a simple algebraic group G reduces in a sense to those which are almost simple If an almost simple subgroup of G has a socle which is not isomorphic to a group of Lie type in the underlying characteristic of G then the subgroup is called non generic This paper considers non generic subgroups of simple algebraic groups of exceptional type in arbitrary characteristic **Siberian Advances in Mathematics** ,1996 **Proceedings of the American Mathematical Society** American Mathematical Society, 2004 Contains the material formerly published in even numbered issues of the Bulletin of the American Mathematical Society Mathematical Reviews ,2006 Maximal Subgroups of Exceptional Algebraic Groups Gary M. Seitz, 1991 Let G be a simple algebraic group of exceptional type over an algebraically closed field of characteristic p The subgroups of G maximal with respect to being closed and connected are determined although mild restrictions on p are required in dealing with certain simple subgroups of low rank For $p = 0$ we recover the results of Dynkin **Irreducible Subgroups of Exceptional Algebraic Groups** Donna M. Testerman, 1988 Let Y be a simply connected simple algebraic group of exceptional type defined over an algebraically closed field k of prime characteristic $p = 0$ The main result describes all semisimple closed connected subgroups of Y which act irreducibly on some rational k - Y module V This extends work of Dynkin who obtained a similar classification for algebraically closed fields of characteristic 0 The main result has been combined with work of G Seitz to obtain a classification of the maximal closed connected subgroups of the classical algebraic groups defined over k Publications Update World Bank, 1996 *Notices of the American Mathematical Society* American Mathematical Society, 1991 **A Subgroups of Exceptional Algebraic Groups** Ross Lawther, 2014-09-11 This book is intended for graduate students and research mathematicians interested in group theory and generalizations **Algebras, Groups, and Geometries** ,2008 **Pacific Journal of Mathematics** ,2002-05 *Abstracts of Papers Presented to the American Mathematical Society* American Mathematical Society, 2005
