British Battleships 1889 1904:

British Battleships 1889-1904 R A Burt,2013-10-01 This volume brings to completion the reissue of R A Burt's magnificent bestselling three volume history of British battleships and it covers the pre dreadnought era which has in recent years acquired a new and fervent following. The Russian war scare of 1884 and the public's anxiety about the Royal Navy's ability to fight a modern war at sea resulted in the Naval Defence Act of 1889 and a vast programme of warship construction. Over the next twenty years a fleet of 52 battleships was built construction finally interrupted by the revolutionary Dreadnought design. In this new volume the author presents full details of design and construction armament protection machinery and performance all backed up with accurate data tables listing design figures trials results and full particulars at different stages in the ships careers. The history of each battleship is chronicled and the reader is reminded of their major contribution in the First World War. They bore the brunt of the action at the Dardenelles bombarded the Belgium coast patrolled the North Sea and the Channel reinforced the Italian Fleet and served in East Africa the East Indies and the White Sea. Most were extensively modified during the War and this variety has made them of special interest to the historian enthusiast and ship modeller. With the addition of many new photographs from the author's massive collection this new edition is simply a must have addition to every naval library.

[The Battleship Builders Constructing and Arming British Capital Ships](#) Ian Buxton,Ian Johnston,2013-05-08 The launch in 1606 of HMS Dreadnought the world's first all big gun battleship rendered all existing battle fleets obsolete but at the same time it wiped out the Royal Navy's numerical advantage so expensively maintained for decades. Already locked in the same arms race with Germany Britain urgently needed to build an entirely new battle fleet of these larger more complex and more costly vessels. In this she succeeded spectacularly in little over a decade fifty such ships were completed almost exactly double that of what Germany achieved. It was only made possible by the company's vast industrial nexus of shipbuilders engine manufacturers armament fleets and specialist armour producers whose contribution to the Grand Fleet is too often ignored. This heroic achievement and how it was done is the subject of this book. It charts the rise of the large industrial conglomerates that were key to this success looks at the reaction to fast moving technical changes and analyses the politics of funding this vast national effort both before and beyond the Great War. It also attempts to assess the true cost and value of the Grand Fleet in terms of the resources consumed. And finally by way of contrast it describes the effects of the post war recession industrial contraction and the very different responses to rearmament in the run up to the Second World War.

[Naval Firepower](#) Norman Friedman,2013-08-20 For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same. Because the naval gun platform was itself in motion finding a firing solution was a significant problem made all the more difficult when gun sizes increased and fighting ranges lengthened and seemingly minor issues like wind velocity had to be factored in. To speed up the process and eliminate human error navies

sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman s terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems America s leading naval analyst explains not only how the technology shaped and was shaped by the tactics involved but analyses their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws conclusions that will surprise many readers He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar This is a book that everyone with a more than passing interest in twentieth century warships will want to read and nobody professionally involved with naval history can afford to miss

Russian Imperialism and Naval Power Nicholas Papastratigakis,2011-04-05 From 1904 1905 Russia and Japan were locked in conflict arising from rival imperial ambitions in the Far East Nicholas Papastratigakis offers an integrated analysis of Russian naval strategy in the decade before this Russo Japanese War in which the Russians suffered catastrophic defeat He seeks to determine the extent to which their defeat can be attributed to flawed Tsarist naval strategy in the region Rooted in rich primary resources from Russian French and British archives the book sheds new light on Russia s conduct in international affairs in the pre World War I era He places Russian naval strategy in the broader context of Russian military strategy at the turn of the century and of imperialism and navalism in general This book will be of enormous interest to scholars and students of naval military imperial and Russian history

Dreadnought Roger Parkinson,2015-06-01 The years leading to World War I were the Age of the Dreadnought The monumental battleship design first introduced by Admiral Fisher to the Royal Navy in 1906 was quickly adopted around the world and led to a new era of naval warfare and policy In this book Roger Parkinson provides a re writing of the naval history of Britain and the other leading naval powers from the 1880s to the early years of World War I The years before 1914 were characterised by intensifying Anglo German naval competition with an often forgotten element beyond Europe in the form of the rapidly developing navies of the United States and Japan Parkinson shows that although the advent of the dreadnought was the pivotal turning point in naval policy in fact much of the technology that enabled the dreadnought to be launched was a continuity from the pre dreadnought era In the annals of the Royal Navy two names will always be linked those of Admiral Sir John Jacky Fisher and the ship he created HMS Dreadnought This book shows how the dreadnought enabled the Royal Navy to develop from being primarily the navy of the Pax Britannica in the Victorian era to being a war ready fighting force in the early years of the twentieth century The ensuing era of intensifying naval competition rapidly became a full blooded naval arms race leading to the development of super dreadnoughts and escalating tensions between the European powers Providing a truly international perspective on the dreadnought phenomenon this book will be essential reading for all naval

history enthusiasts and anyone interested in World War I Jutland Michael Epkenhans, Jörg Hillmann, Frank Nägler, 2015-10-23 The essential reappraisal of this seminal event in twentieth century naval history a must have book for the Great War enthusiasts Lone Star Review After months of skirmishes between Britain's Royal Navy Grand Fleet and the German Navy's outnumbered High Seas Fleet conflict erupted on May 31 1916 in the North Sea near Jutland Denmark in what would become the most formidable battle in the history of the Royal Navy In Jutland international scholars reassess the strategies and tactics employed by the combatants as well as the political and military consequences of their actions Most previous English language military analysis has focused on British admiral Sir John Jellicoe who was widely criticized for excessive caution and for allowing German vice admiral Reinhard Scheer to escape but the contributors to this volume engage the German perspective evaluating Scheer's decisions and his skill in preserving his fleet and escaping Britain's superior force Together the contributors lucidly demonstrate how both sides suffered from leadership that failed to move beyond outdated strategies of limited war between navies and to embrace the total war approach that came to dominate the twentieth century The role of memory comparing the way the battle has been portrayed in England and Germany is also examined Jutland is suited not only for scholars but also for a wider audience interested in knowing more about both the war at sea in World War I and its greatest contest Eric Osborne author of The Battle of Heligoland Bight The documentation and scholarship reflected in these articles is outstanding Paul Halpern author of A Naval History of World War I **Warrior to Dreadnought** David K Brown, 2010-09-22 In the 50 years that separated Warrior from Dreadnought there occurred a revolution in warship design quite unparalleled in naval history a period that began with the fully rigged broadside ironclads and ended with the emergence of the great battleships and battlecruisers that were to fight in the First World War The author explains how nineteenth century designers responded to developments in engine technology armour protection and armament in their attempts to develop the best possible fighting ships He details the development of more efficient engines that brought about the demise of the sailing warship and the competition between armour and armament with every increase in the power of guns stimulating the development of ever more sophisticated methods of protection Importantly he explains that the Victorian Royal Navy far from being the reactionary body it is so often depicted as was in fact at the forefront of technological change for example in the employment of torpedoes and the development of countermeasures to them Full accounts are given of the significant naval events and battles of the period making the book a fine narrative history as well as a brilliant work of warship reference D K BROWN was a distinguished naval architect who retired in 1988 as Deputy Chief Naval Architect of the Royal Corps of Naval Constructors He published widely on the subject of warship design and built a reputation as a clear and brilliant commentator on the development of the ships of the Royal Navy He died in 2008
