Atlas of Cross-sectional Anatomy and Radiological Imaging David J. Jackowe,2012 The study of both cadaveric axial cross sections and CT scans is the basis of 21st century anatomy and the cornerstone of clinical diagnostics Modern medical imaging such as CT Computed Tomography scans produce 1 Dimensional anatomic cross sections of the axial plane Learning the proper sequence and orientation of axial cross sections and CT scans is often extremely challenging even for the most dedicated students of anatomy The shapes seen in the axial plane have little relation to the more familiar coronal plane Most texts abandon students to simply memorize the shapes seen at high yield vertebral levels or perform tricky mental gymnastics as they must mentally rotate the axial plane to the more familiar coronal Students are further frustrated when learning CT scans as the shapes seen in gray white CT slices have little relation to the anatomic structures from which they are derived This text serves to solve these problems by illustrating the sequence of axial cross sections and CT scans in unique 3 Dimensional illustrations This 3 D approach clearly demonstrates the relation of the shapes seen in cross sections and CTs to their more familiar coronal sagittal orientation The illustrations themselves have been done by Dr Jackowe in the classic style of Vesalius and Bourguery thus creating a work that is both informative and artistic the first aesthetic anatomy textbook for many years The atlas will serve as a review book suitable for self study and as a companion to standard anatomy textbooks It will appeal to medical anatomy students medical residents and radiologists as well as the general science reader who will appreciate the quality of the illustrations

Cross-sectional Human Anatomy David Dean,Thomas E. Herbener,2000 Featuring full color cross sectional images from The Visible Human Project this new atlas is co authored by a radiologist and includes orientation drawings with corresponding MRIs and CTs Thus students can understand the relationship between anatomy and how it is represented in these imaging modalities The text includes 100 full color tissue images 200 line drawings and 200 magnetic resonance and computed tomography images Images are labeled with numbers the key is on a separate two page spread to facilitate self testing

Human Cross-sectional Anatomy Harold Ellis,B. M. Logan,Adrian K. Dixon,1993 Contains 200 35mm colour transparencies covering all of the cadaveric cross sections and accompanying CT scans represented in the companion book Atlas of Body Sections and CT Images The set is accompanied by some brief guide notes
