Beverages Gérard Liger-Belair,2025-10-01 Sparkling Beverages Champagne and Beyond offers a complete overview of the physicochemical processes at work in a sparkling beverage In order to achieve effervescence in a glass of champagne precise knowledge fluid dynamics and CO₂ solubility are necessary This reference covers these concepts as well as historical contexts and modern day production methods of simple sparkling waters and sugar free sparkling soft drinks to more complex alcoholic beverages such as beers or sparkling wines The book breaks down the science behind the fizz in our drinks while also examining sensory experiences associated with opening smelling and testing sparkling beverages Written by a true expert on the topic and complete with beautiful original photography this unique interdisciplinary work will interest researchers and industry producers alike Summarizes the latest scientific advances in sparkling beverages with a special focus on champagne and sparkling wines Comprehensively covers the sensory science of champagne an iconic sparkling drink recognized worldwide from uncorking the bottle to the action of the bubbles bursting in glasses Discusses the mechanisms of CO₂ solubility and resulting bubble dynamics Sea Salt Aerosol Production Ernie R. Lewis,Stephen E.

Schwartz,2004-01-09 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 152 Sea salt aerosol SSA exerts a major influence over a broad reach of geophysics It is important to the physics and chemistry of the marine atmosphere and to marine geochemistry and biogeochemistry generally It affects visibility remote sensing atmospheric chemistry and air quality Sea salt aerosol particles interact with other atmospheric gaseous and aerosol constituents by acting as sinks for condensable gases and suppressing new particle formation thus influencing the size distribution of these other aerosols and more broadly influencing the geochemical cycles of substances with which they interact As the key aerosol constituent over much of Earth s surface at present and all the more so in pre industrial times SSA is central to description of Earth s aerosol burden Air-Sea Exchange: Physics, Chemistry and Dynamics G.L. Geernaert,2013-04-17 During the 1980 s a wealth of information was reported from field and laboratory experiments in order

to validate and/or modify various aspects of the surface layer Monin Obukhov M O similarity theory for use over the sea and to introduce and test new concepts related to high resolution flux magnitudes and variabilities For example data from various field experiments conducted on the North Sea Lake Ontario and the Atlantic experiments among others yielded information on the dependence of the flux coefficients on wave state In all field projects the usual criteria for satisfying M O similarity were applied The assumptions of stationarity and homogeneity was assumed to be relevant over both small and large scales In addition the properties of the outer layer were assumed to be correlated with properties of the surface layer These assumptions generally required that data were averaged for spatial footprints representing scales greater than 25 km or typically 30 minutes or longer for typical windspeeds While more and more data became available over the years and the technology applied was more reliable robust and durable the flux coefficients and other turbulent parameters still exhibited significant unexplained scatter Since the scatter did not show sufficient reduction over the years to meet customer needs in spite of improved technology and heavy financial investments one could only conclude that perhaps the use of similarity theory contained too many simplifications when applied to environments which were more complicated than previously thought

Tip Streaming of Simple and Complex Fluids José María Montanero, 2024-04-29 This book comprehensively describes the tip streaming in simple fluids and those containing surfactants and polymeric molecules It summarizes the theoretical models and approximations commonly adopted to analyze this phenomenon It provides relevant experimental results and presents the scaling laws for rationalizing those results The stability of the flows leading to tip streaming is analyzed theoretically and experimentally Attention is paid to the effects of surfactant monolayers and viscoelasticity including solutocapillarity interfacial elasticity surface viscosity and extensional thickening caused by the polymer coil stretch transition It also offers an overall perspective of the numerous technological applications of the tip streaming phenomenon Remarkable examples are the production of microemulsions and microencapsulation of active agents for the food and pharmacy industries the atomization of charged liquids for analytical chemistry and the ejection of ultra fast and ultra thin jets for crystallography Physical mechanisms responsible for the onset of tip streaming driven by hydrodynamic and electrohydrodynamic forces are described Relevant theoretical and experimental results of the periodic microdripping and continuous microjetting modes of tip streaming produced with microfluidic configurations such as electrospray flow focusing coflowing and selective withdrawal are discussed The physical mechanisms responsible for the instability of the microjetting mode are studied in detail The book collects the scaling laws used to predict the outcome of the microfluidic configurations mentioned above The author combines state of the art experimental results and linear stability analysis to identify the instability mechanisms limiting the applicability of the above mentioned microfluidic configurations In this way the book connects experimental observations with fundamental aspects of tip streaming bridging the microfluidic and fluid dynamicist communities The connection between results obtained from the

theoretical and experimental approaches will help experimentalists to understand the fundamental aspects of their practical problems A useful guide for researchers working on hydrodynamic focusing and electrospray *Research* University of North Carolina (1793-1962),1929 Bubble Formation M.
