The field of random matrix theory has seen an explosion of activity in recent years with connections to many areas of mathematics and physics. However, this makes the current state of the field almost too large to survey in a single book. In this graduate text, we focus on one specific sector of the field: namely, the spectral distribution of random Wigner matrix ensembles, such as the Gaussian Unitary Ensemble, as well as iid matrix ensembles. The text is largely self-contained and starts with a review of relevant aspects of probability theory and linear algebra. With over 200 exercises, the book is suitable as an introductory text for beginning graduate students seeking to enter the field.

Angular Momentum William J. Thompson, 2008-09-26. Develops angular momentum theory in a pedagogically consistent way, starting from the geometrical concept of rotational invariance. Uses modern notation and terminology in an algebraic approach to derivations. Each chapter includes examples of applications of angular momentum theory to subjects of current interest and to demonstrate the connections between various scientific fields, which are provided through rotations. Includes Mathematica and C language programs.

Solving of Determinants with Functional Graphs Anatoly Rozenblat, 2015-03-09. The content of this book is related to a specific topic in linear algebra: advantageously, to the matrix determinant. The main objective of this book is to reduce the calculation processes for matrices determinants $3 \times n \times 6$ with application of functional graphs on the basis of expansion and Laplace methods. In this book, many extensive exercises are included that can assist students in solving some complex problems in the process of evaluation of determinants with the use of functional graphs. Special features of this book include the following: Guide to the use of graphs for matrices determinants; Solving of determinants for matrices $2 \times n \times 3$; General algorithms for evaluation of determinants with matrices $4 \times n \times 6$; Functional graphs and algorithms for symmetric and oblique
