Mathematical Modelling of Environmental and Ecological Systems J.B. Shukla, T.G. Hallam, V. Capasso, 2012-12-02 This volume contains a cross section of the papers presented at the International Symposium on Mathematical Modelling of Ecological Environmental and Biological Systems held in Kanpur India in August 1985 The choice of topics emphasizes many aspects of ecological and environmental matters including air and water pollution ecotoxicology resource management epidemiology and population and community ecology It is intended that this volume will focus international attention upon some problems in the ecological and environmental sciences that can be impacted by mathematical modelling and analysis

Mathematical Models in Biology Leah Edelstein-Keshet, 1988-01-01 Mathematical Models in Biology is an introductory book for readers interested in biological applications of mathematics and modeling in biology A favorite in the mathematical biology community it shows how relatively simple mathematics can be applied to a variety of models to draw interesting conclusions Connections are made between diverse biological examples linked by common mathematical themes A variety of discrete and continuous ordinary and partial differential equation models are explored Although great advances have taken place in many of the topics covered the simple lessons contained in this book are still important and informative Audience the book does not assume too much background knowledge essentially some calculus and high school algebra It was originally written with third and fourth year undergraduate mathematical biology majors in mind however it was picked up by beginning graduate students as well as researchers in math and some in biology who wanted to learn about this field

Interplay of Fractals and Complexity in Mathematical Modelling and Physical Patterns Santo Banerjee, A. Gowrisankar, D. Easwaramoorthy, S. Nandhini, A. Manimaran, 2025-03-07 This book presents selected peer reviewed contributions from the International Symposium on Mathematical Analysis of Fractals and Dynamical Systems 2023 ISMAFDS 2023 held at the Department of Mathematics School of Advanced Sciences Vellore Institute of Technology Tamil Nadu in India during August 24 25 2023 It offers readers an array of captivating connections between fractal theory and nonlinear dynamics across various physics sub domains and mathematical modeling Fractal geometry has been developed to describe irregular natural objects that defy characterization using Euclidean geometry Fractal techniques such as fractal dimension and fractal functions prove effective in mathematically modeling real world phenomena and forecasting future

consequences The impact of fractal theory on physical sciences is widely recognized as natural phenomena frequently exhibit fractal structures These new concepts revolutionize our understanding of the large scale properties of matter distribution in the universe The book aims to familiarize readers with recent developments in common fractal patterns found in statistical physics quantum physics and plasma physics Furthermore it highlights the relationship between fractals and nonlinear dynamics through innovative approaches in mathematical modeling This publication caters to professionals in mathematics physics and computer science and also serves as a helpful resource for non specialists seeking to comprehend fractal and nonlinear dynamics concepts It offers valuable applications for researchers in both pure and applied backgrounds of physics and engineering

Population Biology H.I. Freedman,C. Strobeck,2013-03-13 This volume contains the Proceedings of the International Conference in Population Biology held at The University of Alberta Edmonton Canada from June 22 to June 30 1982 The Conference was sponsored by The University of Alberta and The Canadian Applied Mathematics Society and overlapped with the summer meeting of CAMS The main objectives of this Conference were to bring mathematicians and biologists together so that they may interact for their mutual benefit to bring those researchers interested in modelling in ecology and those interested in modelling in genetics together to bring in keynote speakers in the delineated areas to have sessions of contributed papers and to present the opportunity for researchers to conduct workshops With the exception of the last one the objectives were carried out In order to lend some focus to the Conference the following themes were adopted models of species growth predator prey competition mutualism food webs dispersion age structure stability evolution of ecological parameters evolution of behaviour life history strategies group and social selection and evolution of genetic systems There were speakers invited and or contributed papers in each of these areas Talks were given on Tuesday June 22 to Friday June 25 and on Monday June 28 to Wednesday June 30 On each day there were several talks by the principal speakers as well as contributed sessions Altogether there were ninety one papers given of which twelve were by the principal speakers There were one hundred and twenty three registered participants from twelve different countries

Gillman,2009-07-07 Students often find it difficult to grasp fundamental ecological and evolutionary concepts because of
their inherently mathematical nature Likewise the application of ecological and evolutionary theory often requires a high
degree of mathematical competence This book is a first step to addressing these difficulties providing a broad introduction to
the key methods and underlying concepts of mathematical models in ecology and evolution The book is intended to serve the
needs of undergraduate and postgraduate ecology and evolution students who need to access the mathematical and
statistical modelling literature essential to their subjects The book assumes minimal mathematics and statistics knowledge
whilst covering a wide variety of methods many of which are at the fore front of ecological and evolutionary research The
book also highlights the applications of modelling to practical problems such as sustainable harvesting and biological control
Key features Written clearly and succinctly requiring minimal in depth knowledge of mathematics Introduces students to the
use of computer models in both fields of ecology and evolutionary biology Market senior undergraduate students and
