## **Development And The Developing World:**

**Distribution and Development** Gary S. Fields, 2002-07-26 Most of the world's people live in developing economies as do most of the world's poor. The predominant means of economic development is economic growth. In this book Gary Fields asks to what extent and in what circumstances economic growth improves the material standard of living of a country's people. Most development economists agree that economic growth raises the incomes of people in all parts of the income distribution and lowers the poverty rate. At the same time some groups lose out because of changes accompanying economic growth. Fields examines these beliefs asking what variables should be measured to determine whether progress is being made and what policies and circumstances cause some countries to do better than others. He also shows how the same data can be interpreted to reach different even conflicting conclusions. Using both theoretical and empirical approaches Fields defines and examines inequality, poverty, income mobility and economic well being. Finally he considers various policies for broad based growth. Copublished with the Russell Sage Foundation.

Written in a clear and accessible way it introduces students to the key theoretical perspectives and conceptual frameworks in development studies and provides a guide to contemporary issues and current debates. The early part of the book focuses on definitions and theories of development providing a historical account of the evolution of development theory and practice in the last few decades through the impasse in development studies in the 1980s to the consolidation of the neo liberal consensus across the world. Subsequent chapters analyse key development strategies, the role of the state and of international trade in the context of a number of contemporary problems including the spread of HIV in Africa, the use of GM technology in agriculture and the role of education, population growth and urbanization. In doing so Kambhampati highlights the interdependence between the causes and consequences of development, emphasizing why the development problem has been hard both to identify and to solve.
