

# World Food Problem

- 1) **NATURAL DISASTERS** : Climate change is having an increased impact on food production as droughts and flooding become more frequent and more severe. Shrinking access to fertile land and water may trigger refugee crises and conflicts.
- 2) **POVERTY** : Ultimately, the main reason why most people are unable to feed themselves is not that food is unavailable but they cannot afford it.  
But poverty also reduces food output. Many African farmers produce small harvests because they lack irrigation and fertilisers.
- 3) **Example** : Africa has the lowest fertiliser usage in the world – a measure of how its farmers are simply unable to afford the inputs used by their developed world counterparts.
- 4) **GLOBAL FOOD PRICES** : Rising global food prices affect people's ability to buy enough to feed their families... especially the urban poor, who can spend as much as 80 percent of their income on food.
  - In 2007 and 2008, the global price of basics like rice, wheat and maize soared, triggering riots in many countries.
- 5) **Uncontrolled Population** : "The balance of production and consumption" of foodstuffs is also a problem. On Oct 31st 2011, the world population grows up to 7 billion.  
So, if the world population grows up in current pace, the amount of production of cereal crops is said to be unable to catch up with the population in the future.
