

Disaster, PTSD, and Psychological First Aid

Topic: Health & Medicine | Words: 692 | Pages: 2

Insights on Psychological First Aid

Psychological first aid includes strategies designed to help and support children, adolescents, and parents exposed to disasters and terrorism. The approach recognizes children and adolescents as more vulnerable to trauma and related stress due to their resilience weakness (Friedman, 2015). Psychological first aid is designed to help patients recover from initial traumatic distress and assure the patients short-term, midterm, and long-term coping with the traumatic events. Psychological first aid should be consistent and evidence-based, practically applicable in the field, appropriate, and culturally flexible.

In executing psychological first aid, individual responders must make a keen observation before asking the affected children about the kind of help. Moreover, they should be careful prior to giving practical assistance such as food, clothing, shelter, and water (Fowler, 2015). After disasters, some affected people may require more help than others, and thus the aid should target the right individuals. Survivors should be spoken in a polite, sensitive, and patient way. While some needy remainders may avoid assistance, others who are undeserving will want to gain from the service (Fowler, 2015). Clear and interpersonal communication with these individuals will help to determine the exact problem they face.

Disaster A Psychological Essay

Lauren Gardner

Disaster A Psychological Essay:

Disaster Martha Wolfenstein, 2018-10-24 This is Volume II out of eighteen on a series of the Sociology of Behaviour and Psychology Originally published in 1957 this study is a psychological essay and is the result of a study undertaken for the Committee on disaster Studies of the National Academy of Sciences National Research Council [Encyclopedia of Trauma](#)

Charles R. Figley, 2012-06-19 Trauma is defined as a sudden potentially deadly experience often leaving lasting troubling memories Traumatology the study of trauma its effects and methods to modify effects is exploding in terms of published works and expanding in terms of scope Originally a narrow specialty within emergency medicine the field now extends to trauma psychology military psychiatry and behavioral health post traumatic stress and stress disorders trauma social work disaster mental health and most recently the subfield of history and trauma with sociohistorical examination of long term effects and meanings of major traumas experienced by whole communities and nations both natural Pompeii Hurricane Katrina and man made the Holocaust 9 11 One reason for this expansion involves important scientific breakthroughs in detecting the neurobiology of trauma that is connecting biology with human behavior which in turn is applicable to all fields involving human thought and response including but not limited to psychiatry medicine and the health sciences the social and behavioral sciences the humanities and law Researchers within these fields and more can contribute to a universal understanding of immediate and long term consequences both good and bad of trauma both for individuals and for broader communities and institutions Trauma encyclopedias published to date all center around psychological trauma and its emotional effects on the individual as a disabling or mental disorder requiring mental health services This element is vital and has benefited from scientific and professional breakthroughs in theory research and applications Our encyclopedia certainly will cover this central element but our expanded conceptualization will include the other disciplines and will move beyond the individual [Natural Disasters](#)

David Alexander, 2018-10-24 As a well balanced and fully illustrated introductory text this book provides a comprehensive overview of the physical technological and social components of natural disaster The main disaster producing agents are reviewed systematically in terms of geophysical processes and effects monitoring mitigation and warning The relationship between disasters and society is examined with respect to a wide variety of themes including damage assessment and prevention hazard mapping emergency preparedness the provision of shelter and the nature of reconstruction Medical emergencies and the epidemiology of disasters are described and refugee management and aid to the Third World are discussed A chapter is devoted to the sociology psychology economics and history of disasters In many parts of the world the toll of death injury damage and deprivation caused by natural disasters is becoming increasingly serious Major earthquakes volcanic eruptions droughts floods and other similar catastrophes are often followed by large relief operations characterized by substantial involvement of the international community The years 1990 2000 have therefore been designated by the United Nations as the International Decade for Natural Disaster Reduction The book goes

beyond mere description and elevates the field of natural catastrophes to a serious academic level. The author's insights and perspectives are also informed by his practical experience of being a disaster victim and survivor and hence the unique perspective of a participant observer. Only by surmounting the boundaries between disciplines can natural catastrophe be understood and mitigation efforts made effective. Thus this book is perhaps the first completely interdisciplinary, fully comprehensive survey of natural hazards and disasters. It has a clear theoretical basis and it recognizes the importance of six fundamental approaches to the field which it blends carefully in the text in order to avoid the partiality of previous works. It covers the earth and social sciences as well as engineering, architecture and development studies. This breadth is made possible by virtue of a strong emphasis on simple principles of the interaction of geophysical agents with human vulnerability and response. All students of environmental sciences studies and geography should find this book useful. It is an introductory text which treats this dramatic subject area as something demanding serious academic treatment and not just as an assemblage of horror stories. This book is intended for undergraduate students in geography and environmental studies sciences. The book should also appeal to any professional or researcher concerned with man environment relations whether in social science or natural science or engineering.

Mental Health and Disasters Yuval Neria, Sandro Galea, Fran H. Norris, 2009-07-20. Since the attacks of September 11, 2001, disaster preparedness and response has developed into a discrete subspecialty in medicine and the paramount health care initiative of the US Government. The mental health component of disaster response is a serious subject of study as trauma is associated with a substantial and long-lasting psychological burden both on an individual and community level. The psychopathologies associated with disaster are also quite broad, varying from several different types of post-traumatic stress and anxiety disorders to acute variations of grief-associated depression. This book is the definitive reference on mental health and disasters, focused on the assessment and treatment of the full spectrum of psychopathologies associated with many different types of individual disasters. The logistics for utilizing pre-existing community-based mental health services as well as the development of new programs are covered in depth. Case studies and perspectives for improving care incorporating lessons from Hurricane Katrina and 9/11 are included in detail.

The Interrupted System Baruch Kimmerling, Irit Backer, 1985-01-01. According to all accepted criteria, Israel has developed a refined universe of social science research, yet the sociology of war in a society whose brief history is described by rounds of war is utterly lacking. Baruch Kimmerling's monumental work is an effort to correct this glaring omission. He does so by calling upon the best in survey research along with a deep reexamination of the classical social science literature on conflict and consensus. Israeli society is characterized by a large army of reserves, citizen soldiers mobilized into military service during an emergency. One such emergency was the 1973 war, another the 1982 war. Kimmerling's approach is to treat such conflicts as temporary but powerful interruptions in many social processes. These episodic events not only lead to changing conceptions of mobilization but higher risks stemming from potential loss of life and injury, shortages and conceptions of

disaster This is a work which takes seriously both institutional requirements and personal traumas and is thus very much in the mainstream of social analyses Kimmerling and his research assistant Irit Backer have come up with most unusual data to measure stress and strain occupational background of these citizen soldiers relationships between normal work and military tasks the impact of such conflicts on migration patterns among other truly unusual ways of getting at the topic of an interrupted system This is a book written with a controlled passion and no mere data mongering activity The author understands the high costs which Israelis pay to be part of the club He sees interruption as an integral part of a chronic conflict situation Curiously he sees the special features of the Israeli system when viewed in tandem with external pressures and conflicts as enabling Israel to strike a balance which enables it to persevere This is a critical work but spares the reader fatuous policy recommendations
