

What Are Schemas and Why Are They Important?

Schemas are repeatable patterns of actions that children follow to learn, understand or try to explore and explain about the world around them. They're an important part of learning.

When children repeat actions, it supports their brain development as they make connections and links between their actions, helping them to develop an awareness and understanding of the world around them.

As children grow, so do their schemas, and it's through play that they learn. Schema play helps all children reach important milestones and explore the world around them.

What Types of Schemas Are There?

Schemas include:

- moving objects from place to place (transporting)
- collecting like things (sorting)
- stacking (going up and down)
- locomotion (back and forth)
- putting things inside other things (enclosing)
- exploring objects that go round and round (rotational)
- learning about cause and effect (switching)
- going over and under, going through and around a boundary (transformation)
- placing objects in lines, patterns or rows (ordering)
- connecting and enclosing space (enveloping)
- exploring objects that are the same or different (classification)

What Can Schemas Look Like in Children's Behaviour?

Schemas include:

Children will often be engaged in exploring or playing that involves play that is:

- repetitive, such as:

- moving things
- stacking toys
- connecting toys
- using repeated things
- collecting repeated things

It is therefore important for us, as teachers of EYFs, to be understanding of children's behaviour as it can be a sign of their exploration of schemas in play. It is successful and very strong evidence of children's understanding of the world around them.
